# Contents

Preface ix  
Acknowledgments xi  
Acronyms xiii  

1. Introduction 1  
   1.1. Introduction 1  
   1.2. The artificial pancreas system 2  
   1.3. Current research challenges 3  
   1.4. Safety algorithms and techniques for achieving tight glycemic control 6  
   1.5. The philosophy of the monograph 7  
   1.6. Theoretical background 7  
   1.7. Organization of monograph 11  
   References 11  

2. A review on the existing artificial pancreas models 15  
   2.1. Introduction 15  
   2.2. Mathematical modeling of type 1 diabetic patients 15  
   2.3. Important issues in models 29  
   References 30  

3. Control-oriented modeling of type 1 diabetic patients 35  
   3.1. Introduction 35  
   3.2. Intravenous T1D model 37  
   3.3. Subcutaneous T1D model 39  
   Augmented subcutaneous minimal model (ASMM) 39  

   v
3.4. Parameter estimation of the ASMM 44
3.5. Model validation 46
3.6. Chapter summary 58
References 58

4. Design of nonlinear control technique based on feedback linearization 61
4.1. Introduction 61
4.2. IOFL controller with regional pole-placement technique 61
4.3. IOFL-RPP controller design for the ASMM 70
4.4. Chapter summary 76
References 76

5. Design of robust LMI-based control techniques 79
5.1. Introduction 79
5.2. Robust guaranteed cost output feedback control for BMM [1] 79
5.3. Robust observer based output feedback controller design 95
5.4. ROOF-AEM controller design for the ASMM 107
5.5. Chapter summary 110
References 110

6. Design of adaptive robust LMI-based control technique 113
6.1. Introduction 113
6.2. Adaptive robust observer based output feedback controller design 113
6.3. Chapter summary 122
References 122

7. Artificial pancreas system: in-silico model 123
7.1. Introduction 123
7.2. Control oriented in-silico APS 123
Parameter identification of subcutaneous glucose dynamics 124
