Microbial Xylanolytic ENZYMES

PRATIMA BAJPAI
Consultant-Pulp and Paper, Kanpur, India
## Contents

[List of figures] ix  
[List of tables] xi  
[Preface] xiii  
[Acknowledgments] xv

### 1. General background on microbial xylanolytic enzymes  
1.1 Introduction on enzymes  
1.2 Xylan  
1.3 Xylanases  
References  8  
Further reading  11  
Relevant websites  12

### 2. Xylan occurrence and structure  13  
2.1 Introduction  13  
2.2 Xylan occurrence and structure  13  
2.3 Xylan interactions with cellulose and lignin  23  
References  24  
Further reading  28

### 3. Microbial xylanolytic enzyme system and their properties  29  
3.1 Introduction  29  
3.2 Endo-1,4-β-xylanases  30  
3.3 β-D-Xylosidases  38  
3.4 Acetylxylan esterase  41  
3.5 Arabinase  43  
3.6 α-Glucuronidases  45  
3.7 Ferulic acid esterase and p-coumaric acid esterase  48  
References  50  
Further reading  57

### 4. Structure and synergism between the enzymes of the xylanolytic complex  59  
4.1 Introduction  59  
4.2 Xylanosomes  59  
4.3 Synergistic action between multiple forms of xylanase  61  
4.4 Multiple forms of xylanases  62  
References  65  
Further reading  68

List of figures

**Figure 1.1** Structure of lignocellulosic biomass. 2

**Figure 2.1** A hypothetical plant Xylan. 14

**Figure 2.2** Principal hemicelluloses structure in softwood, (A) Galactoglucomannans, (B) Arabinoglucuronoxylan. 14

**Figure 2.3** Structure of Glucuronoxylan Primary structure of MGX (1), AGX (2), water-soluble AGX (ws-AGX) (3), and water-soluble AX (4). 4-O-methyl-d-glucurono-d-xylan (MGX) (arabino)glucuronoxylans (AGXs) (glucurono)arabinoxylans (GAXs) arabinoxylans (AXs). 15

**Figure 2.4** Xylan structures from spruce, poplar, and switchgrass secondary walls. Graphical representation of the main structural features of (A) arabinoglucuronoxylan (AGX) from spruce, (B) acetylated glucuronoxylan (AcGX) from poplar, (C) acetylated glucuronoarabinoxylan (AcGAX) from switchgrass. 16

**Figure 3.1** Schematic representation of the xylan polymer and xylanolytic enzymes system. 30

**Figure 3.2** Overall structure of a family 10 xylanase (2F8Q) showing the typical TIM-barrel fold (A) top (B) side view. 36

**Figure 3.3** Homology-based 3D structure of xylanase proteins by using Swiss-Prot model: (A) Side view, (B) Top view. 36

**Figure 3.4** Catalytic mechanism of α-glucuronidase enzymes. These enzymes bind oligosaccharides with 4-O-methyl glucuronic acid side chains substituted at the 2' hydroxyl group of a terminal xylose residue at the nonreducing end. The catalytic base then activates a water molecule which displaces the attached xylose residue. 48

**Figure 11.1A** Scanning electron micrograph of unbleached (control) eucalyptus kraft pulp (500×). 158

**Figure 11.1B** Scanning electron micrograph of eucalyptus kraft pulp after enzymatic treatment (300×). 159
Figure 11.2  (A–D): Scanning electron micrographs of Eucalyptus kraft pulp. An Untreated eucalyptus kraft pulp showing smooth surfaces on kraft pulp. (B) Eucalyptus kraft pulp treated with xylanase from *Streptomyces* sp. QG-11-3 showing swelling and separation of pulp microfibrils. (C) Eucalyptus kraft pulp treated with xylanase from *Streptomyces* sp. QG-11-3 followed by chemical treatment with 4.5% Cl2. (D) Growth of *Streptomyces* sp. QG-11-3 on eucalyptus kraft pulp fiber showing extent of penetration of organism mycelia in the eucalyptus kraft pulp. 161

Figure 11.3  Typical xylanase and acidification site. 162

Figure 11.4A  SEM micrograph (1500×) of the untreated pulp, after refining; the fiber surfaces were observed to be smooth. 169

Figure 11.4B  SEM micrograph (1500×) of enzyme-treated pulp; the fiber surfaces were observed to be rough, with wrinkles and peeling of microfibrils. 169

Figure 11.5  The efficacy of xylanase to improve ADG, G:F, AID of fiber (NSP, TDF, or NDF), and ATTD of fiber of pigs fed corn-based diets. 190

Figure 11.6A  Scanning electron micrograph of control cotton (0701DR001) fabric at low magnification. 192

Figure 11.6B  SEM of enzymatically desized cotton (0701DR001) fabric at high magnification. 192

Figure 11.6C  SEM of bioscourd cotton (0701DR001) fabric using xylanase, at high magnification. 193

Figure 11.7  Various fermentation products of xyloses. 196

Figure 12.1  Xylanase as a greener tool in different industries. 214

Figure 12.2  Future prospect for development in area of xylanase production using conventional and advanced approaches. 215
