

Amphibians of Ecuador

Craugastoridae. Volume III

Amphibians of Ecuador

Amphibians of Ecuador: Craugastoridae. Volume III is the third in a four-volume series that provides comprehensive, well-illustrated, and authoritative insights, making it an invaluable resource for biologists, conservationists, and others. The series explores, in comprehensive detail, the cultural history and the rich amphibian diversity of Ecuador, providing a thorough review of biogeography, amphibian declines, and conservation.

Volume III specifically focuses on Craugastoridae. Characteristics of each species are listed, defined, and compared to other similar species. Reproductive behavior, where known, is described, as are data on vocalizations. Amphibian distributions are detailed and illustrated with physiographic maps with dots. The volume also addresses the declines, extinctions, and conservation status of each species, noting their occurrence in reserves.

KEY FEATURES:

- Provides detailed and comprehensive accounts for all Craugastoridae species from Ecuador
- New data are incorporated for many species
- Describes with full color maps the distribution of all known taxa
- Includes information on the ecology, reproduction, and behavior of all taxa

Preface.....	xxiii
Acknowledgments.....	xxv
Accounts of Ecuadorian Craugastoridae	xxix
Chapter 1 Family Craugastoridae Rainfrogs, broad-headed rainfrogs.....	1
Genus <i>Barycholos</i> (Rainfrogs) Heyer, 1969	1
<i>Barycholos pulcher</i> (Pretty Rainfrog) (Boulenger, 1898)	2
Genus <i>Craugastor</i> (Rainfrogs) Cope, 1862	4
<i>Craugastor longirostris</i> (Long-Snouted Rainfrog) (Boulenger, 1898).....	4
Genus <i>Lynchius</i> (Rainfrogs) Hedges, Duellman, and Heinicke, 2008	6
<i>Lynchius flavomaculatus</i> (Yellow-Groin Rainfrog) (Parker, 1938).....	7
<i>Lynchius megacephalus</i> (Big-Headed Rainfrog) Sánchez-Nivicela, Urgilés, Navarrete, Yáñez-Muñoz, and Ron, 2019	8
<i>Lynchius parkeri</i> (Parker’s Rainfrog) (Lynch, 1975b).....	10
<i>Lynchius simmonsii</i> (Simmons’ Rainfrog) (Lynch, 1974a)	12
Genus <i>Niceforonia</i> (Rainfrogs) Goin and Cochran, 1963	13
<i>Niceforonia babax</i> (Chattering Rainfrog) (Lynch, 1989).....	14
<i>Niceforonia brunnea</i> (Brown Rainfrog) (Lynch, 1975b).....	15
<i>Niceforonia dolops</i> (Waterfall Rainfrog) (Lynch and Duellman, 1980)	16
<i>Niceforonia elassodiscus</i> (Small-Pad Rainfrog) (Lynch, 1973)	18
<i>Niceforonia nigrovittata</i> (Black-Striped Rainfrog) (Andersson, 1945).....	19
<i>Niceforonia peraccai</i> (Peracca’s Rainfrog) (Lynch, 1975b)	21
Genus <i>Noblella</i> (Litter Frogs) Barbour, 1930	22
<i>Noblella coloma</i> (Coloma’s Litter Frog) Guayasamin and Terán-Valdez, 2009.....	23
<i>Noblella heyeri</i> (Heyer’s Litter Frog) (Lynch, 1986).....	24
<i>Noblella lochites</i> (Imprisoned Litter Frog) (Lynch, 1976a).....	26
<i>Noblella mindo</i> (Mindó Litter Frog) Reyes-Puig, Guayasamin, Koch, Brito-Zapata, Hollanders, Costales, and Cisneros-Heredia, 2021	28
<i>Noblella myrmecoides</i> (Ant Litter Frog) (Lynch, 1976a)	29
<i>Noblella naturetrekii</i> (Naturetrek’s Litter Frog) Reyes-Puig, Reyes-Puig, Ron, Ortega, Guayasamin, Goodrum, Recalde, Vieira, Koch, and Yáñez-Muñoz, 2019b	30
<i>Noblella personina</i> (Masked Litter Frog) Harvey, Almendáriz, Brito-M., and Batallas-R., 2013	32
<i>Noblella worleyae</i> (Worley’s Litter Frog) Reyes-Puig, Maynard, Trageser, Vieira, Hamilton, Lynch, Culebras, Kohn, Brito, and Guayasamin, 2020a.....	34
Genus <i>Oreobates</i> (Rainfrogs) Jiménez de la Espada, 1872	36

<i>Oreobates quixensis</i> (Quijos Rainfrog) Jiménez de la Espada, 1872	37
Genus <i>Pristimantis</i> (Rainfrogs) Jiménez de la Espada, 1870.....	38
<i>Pristimantis acerus</i> (Plain Rainfrog) (Lynch and Duellman, 1980).....	40
<i>Pristimantis achatinus</i> (Agate Rainfrog) (Boulenger, 1898).....	43
<i>Pristimantis actites</i> (Gualita Rainfrog) (Lynch, 1979a).....	46
<i>Pristimantis acuminatus</i> (Pointed-Snout Rainfrog) (Shreve, 1935).....	48
<i>Pristimantis afrox</i> (Afro Rainfrog) Reyes-Puig, Yáñez-Muñoz, Ortega, and Ron, 2020b	49
<i>Pristimantis albuja</i> (Albuja's Rainfrog) Brito-M, Batallas-R., and Yáñez-Muñoz, 2017	51
<i>Pristimantis allpapuyu</i> (Cloud-Land Rainfrog) Yáñez-Muñoz, Sánchez-Nivicela, and Reyes-Puig, 2016	52
<i>Pristimantis almendariz</i> (Almendariz's Rainfrog) Brito-M. and Pozo-Zamora, 2013	53
<i>Pristimantis altamazonicus</i> (Upper Amazon Rainfrog) (Barbour and Dunn, 1921).....	54
<i>Pristimantis altamnis</i> (Headwaters Rainfrog) Elmer and Cannatella, 2008	56
<i>Pristimantis amaguanae</i> (Amaguaña's Rainfrog) Ron, Carrión, Caminer, Sagredo, Navarrete, Ortega, Varela-Jaramillo, Maldonado-Castro, and Terán, 2020	57
<i>Pristimantis anaiae</i> (Anaí's Rainfrog) Ortega, Brito, and Ron, 2022	59
<i>Pristimantis andinodiabolus</i> (Andean Devil Rainfrog) Sánchez-Nivicela, Urgiles, Cedeño-Palacios, Abad-Peñañiel, and Guayasamin, 2021	60
<i>Pristimantis andinogigas</i> (Giant Andean Rainfrog) Yáñez-Muñoz, Veintimilla-Yáñez, Batallas, and Cisneros-Heredia, 2019.....	62
<i>Pristimantis andinognomus</i> (Diminutive Rainfrog) Lehr and Coloma, 2008.....	64
<i>Pristimantis anemerus</i> (Wild's Rainfrog) (Duellman and Pramuk, 1999)	66
<i>Pristimantis apiculatus</i> (Small-Tubercle Rainfrog) (Lynch and Burrowes, 1990).....	67
<i>Pristimantis appendiculatus</i> (Proboscis Rainfrog) (Werner, 1894).....	68
<i>Pristimantis aquilonaris</i> (Northern Peru Rainfrog) Lehr, Aguilar, Siu-Ting, and Jordán, 2007	70
<i>Pristimantis ardyae</i> (Ardy's Rainfrog) Reyes-Puig, Reyes-Puig, and Yáñez-Muñoz, 2013	71
<i>Pristimantis atillo</i> (Atillo Rainfrog) Páez and Ron, 2019	73
<i>Pristimantis atratus</i> (Black-Thighed Rainfrog) (Lynch, 1979c)	74
<i>Pristimantis aureolineatus</i> (Yellow-Lined Rainfrog) Guayasamin, Ron, Cisneros-Heredia, Lamar, and McCracken, 2006.....	76
<i>Pristimantis balionotus</i> (Speckled Rainfrog) (Lynch, 1979c).....	78
<i>Pristimantis bambu</i> (Bamboo Rainfrog) Arteaga-Navarro and Guayasamin, 2011	79
<i>Pristimantis barrigai</i> (Barriga's Rainfrog) Brito and Almendáriz, 2018	81
<i>Pristimantis baryecuu</i> (Deaf Rainfrog) (Lynch, 1979c).....	82
<i>Pristimantis bellae</i> (Bell's Rainfrog) Reyes-Puig and Yáñez-Muñoz, 2012	83
<i>Pristimantis bicantus</i> (Two-Note Rainfrog) Guayasamin and Funk, 2009	84
<i>Pristimantis brevicrus</i> (Short-Legged Rainfrog) (Andersson, 1945)	86
<i>Pristimantis bromeliaceus</i> (Bromeliad Rainfrog) (Lynch, 1979c).....	89
<i>Pristimantis buckleyi</i> (Buckley's Rainfrog) (Boulenger, 1882).....	91
<i>Pristimantis buenaventura</i> (Buenaventura Rainfrog) Arteaga, Pyron, Peñañiel, Romero-Barreto, Culebras, Bustamante, Yáñez-Muñoz, and Guayasamin, 2016.....	92

<i>Pristimantis burtoniorum</i> (Burton's Rainfrog) J. P. Reyes-Puig, C. Reyes-Puig, Franco-Mena, Jost, and Yáñez-Muñoz, 2022	93
<i>Pristimantis caeruleonotus</i> (Blue-Spotted Rainfrog) Lehr, Aguilar, Siu-Ting, and Jordan, 2007a	95
<i>Pristimantis cajamarcensis</i> (Cajamarca Rainfrog) (Barbour and Noble, 1920).....	96
<i>Pristimantis cajanuma</i> (Cajanuma Rainfrog) Urgiles, Székely, Székely, Christodoulides, Sanchez-Nivicela, and Savage, 2019b.....	97
<i>Pristimantis calcarulatus</i> (Small-Calcar Rainfrog) (Lynch, 1976c).....	99
<i>Pristimantis caniari</i> (Cañari Rainfrog) Ramírez-Jaramillo, Reyes-Puig, Batallas, and Yáñez-Muñoz, 2018	101
<i>Pristimantis caprifer</i> (Chevron-Backed Rainfrog) (Lynch, 1977)	102
<i>Pristimantis carlosceroni</i> (Ceron's Rainfrog) Valencia, Bejarano-Muñoz, and Yáñez-Muñoz, 2013	103
<i>Pristimantis carvalhoi</i> (Carvalho's Rainfrog) (Lutz, 1952)	104
<i>Pristimantis cedros</i> (Los Cedros Rainfrog) Hutter and Guayasamin, 2015	105
<i>Pristimantis celator</i> (Hider Rainfrog) (Lynch, 1976c).....	107
<i>Pristimantis chalceus</i> (Brass Rainfrog) (Peters, 1873)	108
<i>Pristimantis chloronotus</i> (Green-Backed Rainfrog) (Lynch, 1969a)	110
<i>Pristimantis chocoensis</i> (Chocó Rainfrog) Reyes-Puig, Yáñez-Muñoz, Ortega, and Ron, 2020b	111
<i>Pristimantis chomskyi</i> (Chomsky's Rainfrog) Páez and Ron, 2019b	113
<i>Pristimantis churuwiai</i> (Churuwia's Rainfrog) Brito, Batallas, and Yáñez-Muñoz, 2017.....	115
<i>Pristimantis cisnerosi</i> (Cisneros' Rainfrog) Reyes-Puig, Yáñez-Muñoz, Ortega, and Ron, 2020b.....	116
<i>Pristimantis citriogaster</i> (Yellow-Bellied Rainfrog) (Duellman, 1992)	117
<i>Pristimantis colodactylus</i> (Short-Fingered Rainfrog) (Lynch, 1979c).....	119
<i>Pristimantis colomai</i> (Coloma's Rainfrog) (Lynch and Duellman, 1997)	120
<i>Pristimantis colonensis</i> (Colón Rainfrog) (Mueses-Cisneros, 2007)	121
<i>Pristimantis condor</i> (Cóndor Rainfrog) (Lynch and Duellman, 1980).....	123
<i>Pristimantis conspicillatus</i> (Amazonian Rainfrog) (Günther, 1858b)	124
<i>Pristimantis cremnobates</i> (Cliff-Dwelling Rainfrog) (Lynch and Duellman, 1980).....	126
<i>Pristimantis crenunguis</i> (Giant Rainfrog) (Lynch, 1976c).....	128
<i>Pristimantis croceoinguinis</i> (Colorful Groin Rainfrog) (Lynch, 1968)	130
<i>Pristimantis crucifer</i> (Cross-Like Rainfrog) (Boulenger, 1899)	131
<i>Pristimantis cryophilus</i> (Cold Rainfrog) (Lynch, 1979c).....	133
<i>Pristimantis cryptomelas</i> (Hidden Black Rainfrog) (Lynch, 1979c)	134
<i>Pristimantis curtipes</i> (Short-Footed Rainfrog) (Boulenger, 1882).....	136
<i>Pristimantis daquilemai</i> (Daquilema's Rainfrog) Brito-Zapata, Reyes-Puig, Cisneros-Heredia, Zumel, and Ron, 2021	138
<i>Pristimantis degener</i> (Different Rainfrog) (Lynch and Duellman, 1997)	141
<i>Pristimantis delius</i> (Delius' Rainfrog) (Duellman and Mendelson III, 1995)	142
<i>Pristimantis devillei</i> (Deville's Rainfrog) (Boulenger, 1880).....	143
<i>Pristimantis diadematus</i> (Crowned Rainfrog) (Jiménez de la Espada, 1875).....	145
<i>Pristimantis dissimulatus</i> (Bright-Colored Rainfrog) (Lynch and Duellman, 1997)	147

<i>Pristimantis duellmani</i> (Duellman’s Rainfrog) (Lynch, 1980e).....	148
<i>Pristimantis ecuadorensis</i> (Ecuadorian Rainfrog) Guayasamin, Hutter, Tapia, Culebras, Peñafiel, Pyron, Morochz, Funk, and Arteaga-Navarro, 2017.....	150
<i>Pristimantis enigmaticus</i> (Obscure Rainfrog) Ortega-Andrade, Rojas-Soto, Valencia, Espinosa de los Monteros, Morrone, Ron, and Cannatella, 2015.....	152
<i>Pristimantis eremitus</i> (Solitary Rainfrog) (Lynch, 1980c).....	153
<i>Pristimantis eriphus</i> (Bleating Rainfrog) (Lynch and Duellman, 1980).....	155
<i>Pristimantis ernesti</i> (Williams’ Rainfrog) (Flores, 1987).....	157
<i>Pristimantis erythros</i> (Blood-Red Rainfrog) Sánchez-Nivicela, Celi-Piedra, Posse-Sarmiento, Urgiles, Yáñez-Muñoz, and Cisneros-Heredia, 2018.....	158
<i>Pristimantis esmeraldas</i> (Esmeraldas Rainfrog) (Guayasamin, 2004).....	159
<i>Pristimantis eugeniae</i> (Del Pino’s Rainfrog) (Lynch and Duellman, 1997).....	161
<i>Pristimantis exoristus</i> (Exiled Rainfrog) (Duellman and Pramuk, 1999).....	163
<i>Pristimantis festae</i> (Festa’s Rainfrog) (Peracca, 1904).....	164
<i>Pristimantis floridus</i> (Flores’ Rainfrog) (Lynch and Duellman, 1997).....	166
<i>Pristimantis gagliardo</i> (Gagliardo’s Rainfrog) Bustamante and Mendelson, 2008.....	167
<i>Pristimantis galdi</i> (Gald’s Rainfrog) Jiménez de la Espada, 1870.....	169
<i>Pristimantis ganonotus</i> (Green Rainfrog) (Duellman and Lynch, 1988).....	170
<i>Pristimantis gentryi</i> (Gentry’s Rainfrog) (Lynch and Duellman, 1997).....	172
<i>Pristimantis gladiator</i> (Swordsman Rainfrog) (Lynch, 1976d).....	173
<i>Pristimantis glandulosus</i> (Glandular Rainfrog) (Boulenger, 1880).....	175
<i>Pristimantis glendae</i> (Glenda’s Rainfrog) Ortega, Brito, and Ron, 2022.....	176
<i>Pristimantis gloria</i> (Gloria’s Rainfrog) Páez and Ron, 2019.....	177
<i>Pristimantis gralarias</i> (Gralarias Rainfrog) Guayasamin, Arteaga, and Hutter, 2018.....	179
<i>Pristimantis gualacenio</i> (Gualaceño Rainfrog) Urgilés, Sánchez-Nivicela, Nieves, and Yáñez-Muñoz, (2014).....	180
<i>Pristimantis hamiotae</i> (Miyata’s Rainfrog) (Flores, 1994).....	181
<i>Pristimantis hampatusami</i> (Hampatusami Rainfrog) Yáñez-Muñoz, Sánchez-Nivicela, and Reyes-Puig, 2016.....	181
<i>Pristimantis hectus</i> (Six-Toed Rainfrog) (Lynch and Burrowes, 1990).....	183
<i>Pristimantis huicundo</i> (Huicundo Rainfrog) (Guayasamin, Almeida-Reinoso, and Nogales-Sornosa, 2004a).....	184
<i>Pristimantis ignicolor</i> (Red-Groined Rainfrog) (Lynch and Duellman, 1980).....	186
<i>Pristimantis illotus</i> (Dirty Rainfrog) (Lynch and Duellman, 1997).....	187
<i>Pristimantis incanus</i> (Hoary Rainfrog) (Lynch and Duellman, 1980).....	189
<i>Pristimantis incomptus</i> (Unadorned Rainfrog) (Lynch and Duellman, 1980).....	190
<i>Pristimantis inusitatus</i> (Uncommon Rainfrog) (Lynch and Duellman, 1980).....	192
<i>Pristimantis jimenezi</i> (Jiménez De La Espada’s Rainfrog) Páez and Ron, 2019.....	193
<i>Pristimantis katoptroides</i> (Mirror Rainfrog) (Flores, 1988).....	195
<i>Pristimantis kichwarum</i> (Kichwa Rainfrog) Elmer and Cannatella, 2008.....	197
<i>Pristimantis kirklandi</i> (Kirkland’s Rainfrog) (Flores, 1985).....	198
<i>Pristimantis kunam</i> (Kunam’s Rainfrog) Ortega, Brito, and Ron, 2022.....	199

<i>Pristimantis kuri</i> (El Oro Rainfrog) Yáñez-Muñoz, Sánchez-Nivicela, and Reyes-Puig, 2016.....	200
<i>Pristimantis labiosus</i> (Large-Lipped Rainfrog) (Lynch, Ruiz-Carranza, and Ardila-Robayo, 1994).....	201
<i>Pristimantis lacrimosus</i> (Tearful Rainfrog) (Jiménez de la Espada, 1875)	203
<i>Pristimantis lanthanites</i> (Hidden Rainfrog) (Lynch, 1975a)	205
<i>Pristimantis latericius</i> (Orange Rainfrog) Batallas R. and Brito M., 2014a.....	207
<i>Pristimantis laticlavius</i> (Broad-Striped Rainfrog) (Lynch and Burrowes, 1990).....	208
<i>Pristimantis latidiscus</i> (Broad-Discad Rainfrog) (Boulenger, 1898).....	210
<i>Pristimantis ledzeppelin</i> (Led Zeppelin's Rainfrog) Brito-Zapata and Reyes-Puig, 2021.....	211
<i>Pristimantis leoni</i> (Leon's Rainfrog) (Lynch, 1976d)	214
<i>Pristimantis leucopus</i> (White-Footed Rainfrog) (Lynch, 1976b)	216
<i>Pristimantis librarius</i> (Librarians' Rainfrog) (Flores and Vigle, 1994)	217
<i>Pristimantis limoncochensis</i> (Limoncocha Rainfrog) Ortega-Andrade, Rojas-Soto, Valencia, Espinosa de los Monteros, Morrone, Ron, and Cannatella, 2015.....	218
<i>Pristimantis lividus</i> (Bluish-Groined Rainfrog) (Lynch and Duellman, 1980)	219
<i>Pristimantis llanganati</i> (Llanganati Rainfrog) Navarrete, Venegas, and Ron, 2016	221
<i>Pristimantis lojanus</i> (Loja Rainfrog) Székely, Székely, Ordoñez-Delgado, Armijos-Ojeda, and Vörös, 2021.....	223
<i>Pristimantis loujosti</i> (Jost's Rainfrog) Yáñez-Muñoz, Cisneros-Heredia, and Reyes P., 2011b.....	226
<i>Pristimantis loustes</i> (Spray Zone Rainfrog) (Lynch, 1979b).....	227
<i>Pristimantis lucidosignatus</i> (Pale-Spotted Rainfrog) Rödder and Schmitz, 2009	228
<i>Pristimantis luscombei</i> (Luscombe's Rainfrog) (Duellman and Mendelson III, 1995).....	229
<i>Pristimantis luteolateralis</i> (Yellow-Spotted Rainfrog) (Lynch, 1976c).....	230
<i>Pristimantis lutzae</i> (Lutz's Rainfrog) Páez and Ron, 2019	232
<i>Pristimantis lymani</i> (Lyman's Rainfrog) (Barbour and Noble, 1920).....	234
<i>Pristimantis malkini</i> (Malkin's Rainfrog) (Lynch, 1980b).....	236
<i>Pristimantis mallii</i> (Malli's Rainfrog) C. Reyes-Puig, J. P. Reyes-Puig, Velarde-Garcéz, Dávalos, Mancero, Navarrete, Yáñez-Muñoz, Cisneros-Heredia, and Ron, 2019a	238
<i>Pristimantis marcoreyesi</i> (Reyes' Rainfrog) J. P. Reyes-Puig, C. Reyes-Puig, Rámirez-Jaramillo, Pérez, and Yáñez-Muñoz, 2014	239
<i>Pristimantis martiae</i> (Crump's Rainfrog) (Lynch, 1974b).....	241
<i>Pristimantis maryanneae</i> (Maryanne's Rainfrog) J. P. Reyes-Puig, C. Reyes-Puig, Franco-Mena, Jost, and Yáñez-Muñoz, 2022	243
<i>Pristimantis matidiktyo</i> (Reticulated Eye Rainfrog) Ortega-Andrade and Valencia, 2012	244
<i>Pristimantis matildae</i> (Matilde's Rainfrog) Székely, Eguiguren, Ordoñez-Delgado, Armijos-Ojeda, and Székely, 2020	245
<i>Pristimantis mazar</i> (Mazar Rainfrog) Guayasamin and Arteaga, 2013	247
<i>Pristimantis metabates</i> (Leaping Rainfrog) (Duellman and Pramuk, 1999).....	248
<i>Pristimantis miktos</i> (Blended Rainfrog) Ortega-Andrade and Venegas, 2014.....	249
<i>Pristimantis miltongallardoii</i> (Milton Gallardo's Rainfrog) Bejarano-Muñoz, Ron, Navarrete, and Yáñez-Muñoz, 2022	250
<i>Pristimantis mindo</i> (Mindo Rainfrog) Arteaga-Navarro, Yáñez-Muñoz, and Guayasamin, 2013	252

<i>Pristimantis minimus</i> (Minute Rainfrog) Terán-Valdez and Guayasamin, 2010	253
<i>Pristimantis modipeplus</i> (Modest Rainfrog) (Lynch, 1981).....	254
<i>Pristimantis morlaco</i> (Morlaco Rainfrog) Sánchez-Nivicela, Toral-Contreras, and Urgiles, 2022	255
<i>Pristimantis multicolor</i> (Multicolored Rainfrog) Páez and Ron, 2019	257
<i>Pristimantis munozi</i> (Muñoz’s Rainfrog) Rojas-Runjaic, Delgado C., and Guayasamin, 2014.....	259
<i>Pristimantis muranunka</i> (Muranunka Rainfrog) Brito M., Almendáriz C, Batallas R., and Ron, 2017.....	260
<i>Pristimantis muricatus</i> (Tubercular Rainfrog) (Lynch and Miyata, 1980).....	261
<i>Pristimantis mutabilis</i> (Mutable Rainfrog) Guayasamin, T. Krynak, K. Krynak, Culebras, and Hutter, 2015	263
<i>Pristimantis myersi</i> (Myers’ Rainfrog) (Goin and Cochran, 1963).....	265
<i>Pristimantis nankints</i> (Nankints Rainfrog) Ron, Carrión, Caminer, Sagredo, Navarrete, Ortega, Varela-Jaramillo, Maldonado-Castro, and Terán, 2020	266
<i>Pristimantis nangaritza</i> (Nangaritza Rainfrog) Páez and Ron, 2019.....	267
<i>Pristimantis nanus</i> (Dwarf Rainfrog) Zumel, Buckley, and Ron, 2021.....	268
<i>Pristimantis nelsongalloi</i> (Nelson Gallo’s Rainfrog) Valencia, Valladares-Suntasig, Tipantiza-Tuguminago, and Dueñas, 2019	270
<i>Pristimantis nephophilus</i> (Cloud-Loving Rainfrog) (Duellman and Pramuk, 1999).....	271
<i>Pristimantis nietoi</i> (Nieto’s Rainfrog) Arteaga, Pyron, Peñafiel, Romero-Barreto, Culebras, Bustamante, Yáñez-Muñoz, and Guayasamin, 2016	272
<i>Pristimantis nigrogriseus</i> (Black–Gray Rainfrog) (Andersson, 1945).....	274
<i>Pristimantis nimbus</i> (Cloud Forest Rainfrog) Urgilés, Posse, Timbe, Astudillo, and Sánchez-Nivicela, 2017.....	275
<i>Pristimantis nyctophylax</i> (Watchman Rainfrog) (Lynch, 1976c).....	276
<i>Pristimantis ocellatus</i> (Ocellated Rainfrog) (Lynch and Burrowes, 1990).....	278
<i>Pristimantis ocreatus</i> (Booted Rainfrog) (Lynch, 1981).....	279
<i>Pristimantis omarrhynchus</i> (Omarrhynchus’ Rainfrog) Bejarano-Muñoz, Ron, Navarrete, and Yáñez-Muñoz, 2022	281
<i>Pristimantis omeviridis</i> (Green Forest Rainfrog) Ortega-Andrade, Rojas-Soto, Valencia, Espinosa de los Monteros, Morrone, Ron, and Cannatella, 2015.....	283

About the Authors

Luis A. Coloma

Coloma is an amphibian biologist who was born in Guaranda, Provincia Bolívar, Ecuador, in 1962. He received his *licenciatura* in biological sciences from Pontificia Universidad Católica del Ecuador (PUCE) in 1987. In 1991, he was granted an MA in the Department of Systematics and Ecology by the University of Kansas, where he was mentored by William E. Duellman; his thesis was “Ecuadorian Frogs of the Genus *Colostethus* (Anura: Dendrobatidae).” For his PhD, he was under the guidance of Linda Trueb; in 1997, he completed his dissertation, “Morphology, Systematics, and Phylogenetic Relationships among Frogs of the Genus *Atelopus* (Anura: Bufonidae).” For 19 years, from 1991 to 2010, he was professor and Senior Lecturer in charge of vertebrates and in charge of the herpetology section at the Escuela de Ciencias Biológicas at PUCE. He mentored 23 *licenciatura* students. Since 2011, he has been Director and Researcher at Centro Jambatu de Investigación y Conservación de Anfibios in Quito, Ecuador. Coloma has published 69 scientific papers, with 56 of these articles focused on amphibians indexed in Scopus (as of 31 May 2023). Additionally, he has published 32 outreach publications, among the latter two coffee table photo books: *Ecuador Megadiverso* and *Sapos, Ecuador Sapodiverso*.

He has described or co-described 31 new species of frogs, among which 28 are Ecuadorian frogs of the genera *Atelopus* (7), *Hyloxalus* (6), *Gastrotheca* (4), *Hyloscirtus* (4), *Engystomops* (3), *Pristimantis* (2), *Leucostethus* (1), and *Epipedobates* (1). Five species of frogs, one lizard, and one earthworm have been named in his honor by his colleagues. In 2007, he was awarded the Sabin Award for Conservation of Amphibians, presented by the World Conservation Union and Conservation International. In 2008, he received the Saint Louis Zoo Conservation Award in recognition of his extraordinary lifelong dedication to the conservation of Ecuadorian biodiversity. In 2009, he was appointed a member of the Latin American Academy of Sciences. Additional

information about Coloma’s life appears in Chapter 2 in Volume I and references therein.

William E. Duellman (1930–2022)

Duellman was a herpetologist who was born in Dayton, Ohio, on 6 September 1930. He passed away on 25 February 2022. He earned three degrees from University of Michigan—a BA (1951) in zoology with a minor in geography, an MS (1952) in zoology with a minor in botany, and a PhD (1956) in zoology with a minor in geology. His doctoral dissertation was on snakes of the genus *Leptodeira*. Since 1959, most of Duellman’s academic life was at the University of Kansas, where he was a professor in the Department of Systematics and Ecology and Curator and Curator Emeritus of Herpetology in the Natural History Museum (now Biodiversity Institute). He published 386 titles (among them 12 books). Among these books are *Hylid Frogs of Middle America*, *An Equatorial Herpetofauna*, *Biology of Amphibians* (with Linda Trueb); *Cusco Amazónico: The lives of Amphibians and Reptiles in a Tropical Rainforest*, *Terrestrial Breeding Frogs* (Strabomantidae) *in Peru* (with Edgar Lehr); and *Marsupial Frogs and Allied Genera*. Duellman served as Major Professor for 12 master’s and 34 PhD students, and he mentored seven post-doctoral scholars. During his time at the University of Kansas Natural History Museum, he built up the collection from 59,000 to more than 300,000 specimens through extensive field work by himself and with his students, and by acquiring other collections, making it the fourth largest herpetological collection in the United States and by far the most significant collection of the herpetofauna of Latin America. He described or co-described 252 species of amphibians from the Neotropics, among which 93 are from Ecuador. Six species of frogs and five species of reptiles are named in his honor. Additional information about Duellman’s life is provided in Chapter 2 in Volume I and references therein.

Contributors

Juan C. Santos produced time-calibrated maximum likelihood phylogenetic trees illustrating the evolutionary relationships of amphibians in Ecuador; Daniel J. Paluh contributed to the production of microCT images and high-resolution computed tomography reconstructions of the skeletons of Ecuadorian amphibian genera. Pedro A. Coloma and Ítalo G. Tapia described the calls of *Pristimantis appendiculatus*, *P. carlosceroni*, *P. ecuadorensis*, *P. eugeniae*, *P. glandulosus*, *P. parvillus*, *P. pycnodermis*, and *P. sirnigeli*. The acknowledgments section further recognizes other contributions made by these individuals.

Foreword

The documentation of biodiversity is not, by any means, easy. Although the complexity of nature is staggering, this particular Volume of the Encyclopedia—which focuses in the frog family Craugastoridae—is, to my taste, one of the best approximations that actually captures the core axes of amphibian diversity.

Craugastoridae (etymologically, the cliff-dancer frogs) is an extravagant and successful result of evolution. The family is composed entirely of direct-developing frogs, meaning that fertilized eggs are laid in terrestrial or arboreal sites, where they develop directly into tiny froglets, skipping all together an aquatic larval phase. This reproductive trait has had huge implications for the niches occupied by this family and, most likely, for the enormous diversification of this lineage, especially in the Andean mountains.

Globally, Craugastoridae contains 27 genera with 929 species. The tiny country known as Ecuador is home to eight genera and 281 species (and counting); in other words, Ecuador has 30% of the species in the family, highlighting, once again, the importance of this country in amphibian research and conservation.

The species richness of Craugastoridae is truly overwhelming; every amphibian taxonomist that works in South America likely has several undescribed species of this family resting on the shelves of a natural history museum, waiting for the elusive time to be formally described. In this context, the Encyclopedia will definitely accelerate the description of new species, facilitating a complete comparison among similar species.

Within Craugastoridae or, I should say, within terrestrial vertebrates, there is a genus that deserves particular attention, *Pristimantis*. No other terrestrial vertebrate rivals *Pristimantis* in terms of species richness. This Neotropical group contains no fewer than 610 species (Frost, 2024). They are a conspicuous component of communities from

the lowland rainforests to the paramos (even close to the snow line). Within a particular ecosystem, they can be found hidden under the ground or close to the canopy. We still do not understand why *Pristimantis* is so speciose when compared to other direct-developing frogs, and we know close to nothing about these frogs' natural history. What is obvious, however, is that these frogs show a remarkable ability to adapt and survive. Some evolutionary novelties include shape-shifting (*P. mutabilis*, *P. sobetes*) and parental care (*P. chocoensis*, *P. achatinus*). Also, remarkably, most *Pristimantis* species have managed to survive the catastrophic amphibian declines linked to the chytrid fungus *Batrachochytrium dendrobatidis*.

When going through the pages of this work, the reader recognizes what biology actually means—a mix of colors, shapes, behaviors, interactions, and threats. Everything is linked by a common history, but also with every species telling its own story.

The documentation of Ecuador's amphibian diversity, through the eyes and work of Luis A. Coloma and William E. Duellman[†], represents a significant milestone. It is a foundational work that will catalyze new research and allow for a closer look at the fascinating hues of nature. This opus will instantly become a new standard for vertebrate studies and, hopefully, will represent a cornerstone for a much-needed integral conservation strategy for a country touched by the evolutionary wand.

Preface

In the preface of Volume I, there is a general recounting and reflection on the purpose and history of the complete opus (Volumes I–IV). Here, the focus is on a few events and taxa to highlight broader issues mostly relevant to the taxonomy and systematics of Ecuadorian taxa, for which we have compiled accounts for each species, genus, family, and order. Volume II includes the accounts of 213 species of Ecuadorian anurans of the families Pipidae, Telmatobiidae, Microhylidae, Dendrobatidae, Ranidae, Bufonidae, and Hylidae.

In 1758, Carl von Linnaeus formalized the modern system of binomial nomenclature to name species while also coining the binomial name (scientific name) for a species now known from Ecuador. The species is *Pipa pipa*, and his taxonomic action was solely based on illustrations of this frog originally collected in Suriname. Nearly a century passed before the first description of a frog named from Ecuador was made: *Atelopus ignescens* (the Jambato), described by the Italian scientist Emilio Cornalia in 1849 in a 15-line morphological account, which was an extensive description for those times. Two centuries later, in 1958, about 200 amphibian species were known from Ecuador. By 1980, this number had increased to 332 species, half of the species currently known in Ecuador, and they were described based on morphological evidence, with a few accounts also including osteological features and phylogenetic analyses, especially the taxonomic works by the research group at the University of Kansas, USA, led by William E. Duellman and Linda Trueb. By the end of 2022, when we ceased adding species to this opus, 655 species were known from Ecuador, and in the recent four decades, this was mostly due to efforts by Ecuadorian taxonomists and systematists. From 2023 up to December 2024, twenty additional, mostly cryptic species were described, and we included them in an addendum in Volume IV. One of the most recent descriptions is that of a cryptic species by the Ecuadorian Pablo Menéndez Guerrero and four collaborators (2024), *Rhinella bella* (beautiful toad), in a detailed 27-page paper that includes data and analyses based on extensive specimen collections, a molecular phylogenetic hypothesis, and the combined evidence of mtDNA sequence variation, morphology, bioacoustics, and environmental information.

The particular cases of *Pipa pipa*, *Atelopus ignescens*, and *Rhinella bella* illustrate the trend of taxonomic knowledge about amphibians in Ecuador, as well as the current accelerating pace, dynamism, and increasing complexity involved in describing this diversity, which is expected to increase substantially in the coming years (but see Löbl *et al.*, 2023), especially in a country like Ecuador, where apparently no fewer than 230 species are awaiting discovery and description. However, this commendable progress is overshadowed by the poor or nonexistent knowledge in aspects of amphibian biology fields beyond morphology and

short DNA sequences (e.g., natural history data, calls, tadpoles, embryos, distributions, population dynamics, ethology, genomics) for most of the species and, even worse, by the possible extinction of nearly 50 of the known species, including an entire family of aquatic frogs Telmatobiidae, a dozen *Atelopus* harlequin frogs, several monophasic marsupial frogs of the genus *Gastrotheca*; some craugastorids and *Hyloxalus* rocket frogs; and probably many other amphibians that were never documented.

The case of *Pipa pipa* helps to highlight the immense knowledge gaps that remain to be addressed. For example, it is nearly unbelievable that a species such as *Pipa pipa* is still poorly known in Ecuador. In an era of genomics, paradoxically, the molecular phylogeny of Ecuadorian populations, its morphological and geographic variation, and its taxonomy are pending issues. Furthermore, recent research (Fouquet *et al.*, 2022) suggests that Ecuadorian populations may not belong to *Pipa pipa*. This case highlights the missing pieces of basic systematic and taxonomic information and the still-inadequate samplings in museum collections. This is a generalized pattern also known for many other taxa (see, for example, remarks for most species of Microhylidae in Volume II or Gymnophiona in Volume IV).

Ironically, the case of the other mentioned species, *Atelopus ignescens*, whose taxonomy and systematics still have pending issues, serves to illustrate the catastrophe of amphibian extinctions and the desperate efforts to save a single population of an otherwise historically extremely abundant species having many populations. This has pushed the nascent Ecuadorian academic and conservationist community along with international collaborators to begin studying it in the contexts of population numbers, natural history, genomics, and ethnozoology (Vega-Yáñez *et al.*, 2024). However, this species is somewhat privileged given its cultural importance, while many hundreds of others suffering the same path of extinction are still awaiting attention.

The most recently described species, such as *Rhinella bella*, which is an extremely common species, is based on integrative taxonomic practices. This undoubtedly represents a step forward in gaining data and knowledge but also highlights the state of scientific developments, which are not free of controversy. This is especially true given contemporary discussions of still-contentious issues and fierce debates such as what defines a species, species boundaries, taxonomic anarchy, taxonomic inflation in the absence of appropriate geographic sampling, the discovery of cryptic diversity, genetic introgression, interspecific hybridization, and basic taxonomic practice-related topics (Garnett and Christidis, 2017; Cook *et al.*, 2023; Arias-Cárdenas *et al.*, 2024; Dubois *et al.*, 2024).

To advance knowledge in various biological fields and reverse the extinction trends of over 400 species, it is

crucial to complete the description of Ecuadorian amphibians. This requires accelerating taxonomic research in Ecuador, significantly increasing governmental and international funding for museum collections and biobanks, digitizing collections, providing open access to information, and establishing legal frameworks that support the scientific exchange of taxonomic specimens and tissues to benefit biodiversity research.

Path for recovery: An ecological overview of the Jambato Harlequin Toad (Bufonidae: *Atelopus ignescens*) in its last known locality, Angamarca Valley, Ecuador. *PeerJ* 12: e17344. <https://doi.org/10.7717/peerj.17344>.

Acknowledgments

While William E. Duellman is no longer with us, his indelible mark on the production of this opus and the near-completion of all species' accounts remains immeasurable. His unique perspective, wealth of experience, knowledge, and unwavering enthusiasm for this project, coupled with meticulous attention to detail, continue to serve as a source of inspiration. Hopefully, his passion for science and amphibians will forever be etched in these pages as a tribute to his titanic contribution to the field of amphibian biology, as well as to the enduring nature of his friendship and partnership that transcends time and space. Similarly, I must express my deepest gratitude to Linda Trueb (his partner), my teacher and mentor at KU, who has been by Bill's side in charting the progress of *Amphibians of Ecuador* since 2015, steadfastly supporting him through challenging times as he embarked on what would ultimately become his final Ecuadorian endeavor. Linda's unwavering commitment also extended to securing part of the funding and seeing this encyclopedia through to its completion. In January 2023, her wise and practical advice was much appreciated. She said, "I really would urge you to cut off adding additional species at a logical time—e.g., no frogs described in 2023! Otherwise, you'll never see the end—kind of like Sisyphus pushing that stone ball up the side of the mountain."

As detailed in Chapter 2 (under the subtitle "From Anfibios de Ecuador to Amphibiawebecuador and to Anfibios del Ecuador-Bioweb at QCAZ") and briefly mentioned in the preface, this opus is the descendant of earlier endeavors involving a vast collective of individuals and friends, encompassing students, collectors, field companions, scientists, administrators, and more. I extend my deepest gratitude for their invaluable contributions. Also, among them, my immense appreciation for their input while at Pontificia Universidad Católica del Ecuador goes to Giovanni Onore, Néstor Acosta-Buenaño, Ítalo G. Tapia, Elisa Bonaccorso, and Juan M. Guayasamin. Onore has always been a source of inspiration and drive, even in the most difficult times. Tapia (the collection manager at the QCAZ) aided, with great energy and empathy, in the field, in the museum, and with the photography of frogs and their development. Many of the photos in the field and in the lab would have not been possible without his collecting efforts and his ability to raise them. Bonaccorso and Guayasamin collaborated throughout leading the JRS and SENEYCYT projects, which, in 2008–2010, provided the funding necessary to enhance the electronic version of AmphibiaWebEcuador. Since 2011, all of these individuals have continued to offer their support in numerous ways during my tenure at Centro Jambatu of Amphibian Research and Conservation (CJ), and I am immensely grateful. In particular, Onore welcomed CJ under the auspices of the *Fundación Otonga* until 2019, when CJ became an independent NGO. Acosta-Buenaño has been instrumental in building the CJ

electronic Encyclopedia (SapopediaEcuador). He not only developed the conceptual and physical models of the database but also played a key role in its programming, design, and layout. His initiative, serenity, and drive are inspiring. During my time at the QCAZ and the establishment of CJ, I received generous support and encouragement from Mark Wanner (Saint Louis Zoo), Joseph Mendelson III, Ron Gagliardo, and Kevin Zippel of Amphibian Ark, and of Lauren A. O'Connell (Stanford University), and Kim L. Hoke (Colorado State University). Their actions spoke louder than words.

For the realization of *Amphibians of Ecuador*, first and foremost, I extend my gratitude to our contributing authors and coauthors who devoted relevant efforts to write some sections. They are (in alphabetical order): Ana Almendáriz-Cabezas, Ernesto Arbeláez Ortiz, Sebastián Bermúdez-Puga, David Brito-Zapata, Mateo Dávila-Játiva, María D. Guarderas, Juan M. Guayasamin, Andrés León-Reyes, Carlos E. Montalvo-Puente, Mónica I. Páez-Vacas, Emilia Peñaherrera-Romero, Carolina Proaño-Bolaños, Carolina Reyes-Puig, David Romo, Camilo Rosero-Gómez, Juan Carlos Sánchez-Nivicela, Andrea Terán-Valdez, Gregory O. Vagle, María Vizcaíno-Barba, and Mario H. Yáñez-Muñoz. Many of these authors (and or coauthors) engaged directly with me, fostering enlightening and fruitful discussions, especially Andrea Terán-Valdez, Mónica Páez-Vacas, Juan M. Guayasamin, María D. Guarderas, Juan C. Santos, Ana Almendáriz-Cabezas, Gregory O. Vagle, Carolina Reyes-Puig, and Carlos E. Montalvo-Puente. My gratitude goes also to Daniel J. Paluh, who enthusiastically (and supported by David C. Blackburn from the Florida Museum of Natural History) embarked on the production of microCT images of each of the genera of Ecuadorian amphibians with amazing results; Juan C. Santos, who, in 2021, performed a phylogenetic analysis and obtained a phylogeny and chronogram for the Ecuadorian amphibians; and to Pedro A. Coloma, Morley Read, and Francisco Velásquez Espín, who enthusiastically analyzed the calls of 13 species: *Pristimantis appendiculatus*, *P. carlosceroni*, *P. ecuadorensis*, *P. eugeniae*, *P. glandulosus*, *P. parvillus*, *P. pycnodermis*, *P. sirnigeli* (PAC and IGT), *Atelopus balius*, *A. coynei*, *A. exiguus*, *A. ignescens* (MR), and *Ranitomeya ventrimaculata* (FVE, MR), most of which were recorded by Ítalo G. Tapia. Carlos E. Montalvo-Puente introduced me to the amazing world of archeology after a visit to Museo El Alabado.

Some of the authors of subtitles in Volumes I and IV also helped with other aspects of the complete opus in various ways. For example, Terán-Valdez, the CJ Collections Manager, edited and revised all of the accounts; she also helped to write descriptions of the tadpoles of 29 species and of many ontogenetic series. Her input to the encyclopedia in countless ways has been very valuable. She was always there (including non-working hours and vacations),

ready to help with anything. Camilo Rosero-Gómez helped with refining maps and associated data with amazing efficiency. Guarderas helped with many administrative tasks and the acquisition of funds related to the encyclopedia; Juan C. Santos reviewed the section about David C. Cannatella; Almendáriz provided some data, photos, and critically reviewed the sections titled “Peters and the Harlequin Frogs, a Rebirth for Amphibian Collections” in Chapter 2 of Volume I; Vigle also edited and reviewed the MECN section under the subtitle “The DHMECN Collection: From the Friends of Nature to the National Biodiversity Institute” in Chapter 2 of Volume I; Mónica Páez-Vacas edited part of the section that includes the information about calls of Ecuadorian frogs and also helped with the organization of the Red List table. Guayasamin aided in obtaining information of authors from Scopus.

Additional reviews of sections of Volumes I–IV were conducted by John E. Simmons and Joseph Mendelson III (Chapters 1 and 2), Giovanni Onore (amphibians at the QCAZ), Andrew Gray (Phyllomedusidae), Santiago Castroviejo-Fisher and his PhD student Lourdes Echevarría (Hemiphractus), and Martha L. Crump (part of “In Memoriam”). John E. Simmons drew my (LAC) attention to Jorge Icaza’s mention of frogs in Ecuadorian literature. Pedro A. Coloma helped with the organization of the Red List information. Sofía Carvajal-Endara and Gustavo Pazmiño-Otamendi helped with refining the geographic information and the production of many of the distribution maps. Néstor Acosta-Buenaño aided in part of the compilation, organization, and editing of the information about vocalizations. I also appreciate the editorial support from Crumly Chuck, Kara Roberts, Balaji Karuppanan, Shayla McKeown, and the rest of the team at CRS Press and Taylor & Francis Group.

I couldn’t have compiled the biographies of many of the amphibian biologists included in Chapter 2 of Volume I without their positive response to my request for their CVs, photos, and biographical information. I thank them all (in alphabetical order): Ana Almendáriz-Cabezas, Alejandro Arteaga, Diego Batallas-Revelo, Jorge Brito Molina, Marcel Adrián Caminer Rodríguez, Sofía Carvajal-Endara, Glenn Flores, Diego F. Cisneros-Heredia, Jaime Culebras, Juan M. Guayasamin, María José Navarrete, Jhael Ortega, Lauren A. O’Connell, Nadia B. Páez, Mónica I. Páez-Vacas, Carolina Proaño-Bolaños, Juan C. Santos, Morley Read, Carolina Reyes-Puig, Juan P. Reyes-Puig, Juan Carlos Sánchez-Nivicela, Diana Székely, Paul Székely, Elicio E. Tapia, Ítalo G. Tapia, Andrea Terán-Valdez, Verónica L. Urgilés, Jorge H. Valencia, and Mario H. Yáñez-Muñoz.

Numerous other people have contributed in various ways, and their efforts are greatly appreciated. Joseph Mendelson III wrote an insightful foreword for Volume I with great enthusiasm and generosity. He was the perfect person for such a task, given his deep knowledge and his lifelong commitment to amphibian systematics and conservation in the Neotropics. Moreover, his close bond with Bill Duellman, serving as both mentor and friend, and his consistent support of Coloma in various professional pursuits made him

an ideal contributor. Many thanks go to Juan C. Santos, Juan M. Guayasamin, and Mónica Páez-Vacas for writing the forewords for Volumes II, III, and IV, respectively. Our long-standing friendship, which began when they were my students at PUCE, has enriched our lives and grown into a productive and successful collaboration in amphibian research. Giovanni Onore has called my attention to ethnozoological aspects of amphibians. Tonnie Woeltjes stood out as a dedicated resource, diligently searching for and providing copies of hard-to-find publications, particularly those pertaining to amphibians in the context of hobbyists. Juan C. Santos and John E. Simmons also made significant contributions by actively seeking and sharing copies of numerous publications. Jaime Culebras kindly pointed out some of my misidentifications, particularly within the genus *Pristimantis* (as he also provided photos), and generously shared his expertise derived from extensive field experience. He has gathered rare frogs and specimens, contributing to our *ex situ* colonies and museum collections. Furthermore, he has been a constant source of lively discussions and passion for frogs. Thanks to Connie Dickinson, who generously organized a visit to a Tsáchila community, where Alfonso, Primitivo, José Jacinto, and Milton Aguavil shared with us their hospitality and knowledge of common names of frogs in Tsáfiqui. Leonardo Negrete assisted in compiling the information related to the calls of centrolenid frogs. Néstor Acosta-Buenaño and Sofía Ballaz contributed to editing the information of calls of Ecuadorian frogs included in the Appendix. Alexander Hirtz’s openhandedly provided access for photographing his collection of archeological pieces of amphibians. Erika Ullauri P. granted entry to photograph archeological artifacts of the Museo Nacional del Ecuador. Amanda B. Quezada helped to edit thousands of bibliographic references and numerous other editorial tasks with great efficiency.

Our deepest thanks go to the people who collected specimens in our respective institutions (KU, QCAZ, CJ). All are cited in the databases of the museum collections, and the ones that made the most significant contributions are also mentioned in the history section. At Centro Jambatu, we especially thank to Elicio E. Tapia; Mónica I. Páez-Vacas; Morley Read; Ítalo G. Tapia; Arturo Guasti; Patricio Vargas Mena; Mark Wanner; Jaime Culebras; Jan, José, and Thomas Verkade; Juan C. Santos; Amadeus Plewnia; Manuel Morales-Mite; Sofía Carvajal-Endara; Amanda B. Quezada; Carolina Proaño-Bolaños; H. Mauricio Ortega-Andrade; and about 150 other collectors who brought specimens and associated data to CJ. Some of them also brought live amphibians to be photographed in the lab. My particular gratitude goes to the Verkade family (Jan, José, and Thomas) for their searching for specific species of frogs (under my request), and their tadpoles, recordings of calls, and photography skills (all material deposited at CJ). Additionally, Thomas found a rare caecilian from southwestern Ecuador. Thanks go to Fernando Vaca and Nanto Huamoni, who enthusiastically supported our CJ scientific work and collections at the Shiripuno Lodge.

Most of the photographs of tadpoles, ontogenetic series, and reproduction data would have not been possible without the dedication to raising them in the lab while at the QCAZ (up to 2010) and at CJ (2011–2023) of the following amphibian keepers, vivaria managers, veterinarians, and several assistants. They are Ítalo G. Tapia (2001–2010 at the QCAZ, 2023 to date at CJ), Diego Almeida-Reinoso (2004–2010 at the QCAZ, 2011–2014 at CJ), Freddy Almeida-Reinoso (insectarium, QCAZ 2007–2010, CJ 2011–2014), Gabriela Aguiar (2011–2016), Patricio Vargas Mena (2013–to date), Marco de Rossi (CJ vivaria, 2014–to date), Elena Naydenova (veterinarian, 2015–to date), Diana Carolina Salazar (2016–2019), Gabriela Manzano (2016–2017), Carlos Valle Piñuela (2016–2018), Renata Gavilán (2018–2019), Leonardo Negrete (2018–2019), Berenice Benavides (2021–2022), Estefanía Erazo (2017–2020), Xavier Cisneros (2019–2021), Johanna Paz (2019–2021), Daniel Romero (2019–to date), Fernanda Gordon Domínguez (2021–2023), Alex Achig (2021–to date), Belén Morales (2022–2023), and Mateo Gómezdelatorre (2022–2023). Among them, Ítalo G. Tapia and Patricio Vargas Mena joined me on innumerable collecting field trips, and I value them as great field companions. Carlos Valle Piñuela generously taught me the use of QGIS for the production of maps. Esther M. Langan, Collection Manager at the National Museum of Natural History of the Smithsonian Institution, graciously provided information in response to several inquiries.

When compiling data included in this encyclopedia during my time at the QCAZ and CJ, I relied heavily on the invaluable assistance provided by the collection managers, curatorial assistants, volunteers, and their dedicated efforts in managing preserved specimens and the living collection. I am grateful for the support and contributions at the QCAZ of Ítalo G. Tapia (2002–2010) and Diego Almeida-Reinoso (2004–2010) and at CJ of Sofía Carvajal-Endara (2011–2013), Diego Almeida-Reinoso (2011–2014), Elicio E. Tapia (2011–2016), Manuel Morales-Mite (2015–2018), Morley Read (2017–2018), Sebastián Hernández-Nieto (2018), Andrea Terán-Valdez (2018–to date), and Amanda B. Quezada (2021).

Several aspects of the production of *Amphibians of Ecuador* received partial funding from various grants. One of these grants was the PARG project, which provided support during my temporal association with Universidad Regional Amazónica Ikiam from 2015 to 2017 and subsequently at CJ until 2019. I extend my gratitude to Andrea Coloma Santos and Adriana Paulina Guarderas Valverde for their assistance in crafting the PARG project proposal. In 2019–2020, another grant that contributed to this endeavor was an award to Lauren A. O’Connell (No./FAIN No. 1845651) from the US National Science Foundation. This grant played a vital role in covering an important portion of salaries and printing costs. Lauren’s aid and research initiatives are greatly acknowledged from the foundation of CJ from 2011 to date. During 2012–2018, research grants to Kim L. Hoke and her student Molly C. Womack by the US National Science Foundation (NSF IOS–1350346, OISE– 1157779,

and PRFB–1611752) funded activities specifically related to the documentation of ontogenies of Bufonidae; thus, this project became an important aid to CJ and these books.

Additional financial and miscellaneous support for CJ and this work has been provided by Wikiri, an Ecuadorian biotrade enterprise, and the Saint Louis Zoo. These institutions have consistently offered crucial support to CJ and this project, and I could not have accomplished this without their assistance. I wish to express my profound gratitude to María D. Guarderas, the manager of Wikiri and CJ coordinator, whose inspirational leadership and unwavering dedication have been instrumental in sustaining CJ. She has initiated numerous projects to advance our scientific work and adeptly managed the complex bureaucratic and administrative tasks at CJ. She was joined in recent years by Andrea Terán-Valdez, who plays an instrumental function in scientific coordination. Their support while I have been immersed in this opus, often setting aside many other responsibilities at my institution, did not waver.

I would also like to extend my heartfelt thanks to the Saint Louis Zoo, represented by Jeff Bonner, Eric Miller, Lissa Kelley, Mark Wanner, Lauren Augustine, and more recently by Justin Eiden. Their financial assistance has played a pivotal role in our work. In addition, I want to convey my deepest appreciation to Mark Wanner at the Saint Louis Zoo, with whom I have shared numerous field trips over the years in our pursuit of frogs. Our friendship, which began in the bed of a pickup truck while traveling for a nighttime frog search during a frog meeting in Panama in 2006, has endured and enriched both our personal and professional lives.

Finally, I dedicate this work with my profound and infinite gratitude to my extended family, and especially to Alexandra Quiguango Ubillús (my wife); to our sons, Pedro Antonio and José Miguel; and to my mother, Lida María Román. Their devoted emotional support surpasses any words I can write.

PHOTO AND ILLUSTRATION CREDITS

All photos and illustrations are appropriately credited in their respective figure captions. We have employed abbreviations for the primary authors of the majority of the photos, namely Luis A. Coloma (LAC), William E. Duellman (WED), Steven Guevara Salvador (SGS), and Diego Acosta López (DAL). The latter two worked at CJ focusing on photographic documentation and photo designing in 2016–2020 and from 2018 onwards, respectively. Steven generously and patiently assisted with the detective work of finding the data associated with thousands of photos that had not been completely labeled. Thanks go to Rafe M. Brown and Ana Motta for facilitating access to the KU photographic archive and diligently providing scans. We extend our special thanks go to Jaime Culebras, Amanda B. Quezada, Morley Read, Paul Székely, and Mario H. Yáñez-Muñoz, who graciously shared numerous photos with us,

many of which were crucial to expand the photographic documentation of Ecuadorian amphibians. Additionally, we are grateful to Jorge Brito Molina, Juan Carlos Sánchez-Nivicela, Gregory O. Vigle (for his frog photos and photos of Kenneth Miyata), Carolina Reyes-Puig, Elicio E. Tapia, Fernando Coloma Román, Jan C. Verkade, Diego Batallas-Revelo, Juan P. Reyes-Puig, Ross Maynard (The Biodiversity Group), Amadeus Plewnia, Andreas Nöllert, John E. Simmons, Marinus S. Hoogmoed, J. S. Bermingham,

Alejandro Arteaga, Fernando Rojas-Runjaic, Joel Sartore, Martín R. Bustamante, Ted Kahn, Cristian Paul Nieves, Diego Almeida-Reinoso, Erwin Patzelt, José Vieira-Fernandes, Mateo Vega-Yáñez, Daniela Franco-Mena, Patricia A. Burrowes, Alex Achig, Frank Pichardo, Jazmín Buitrón, Jenna Welch (Division of Amphibians & Reptiles, Smithsonian Institution), Matthijs Hollanders, and Francesca Angiolani also contributed generously by providing sets of photos and/or unique important photos.

Accounts of Ecuadorian Craugastoridae

ORGANIZATION AND CONTENT OF ACCOUNTS

Following are the accounts of each of the 281 species belonging to the eight genera of the anuran family Craugastoridae included in this Volume III and that we recognize up to the year 2022. Accounts of new species described from

January 2023 to January 2025 are included in the Addendum of Appendix 2, in Volume IV.

The phylogenetic placement of Craugastoridae is shown in Figure 0.1. Accounts of genera and species of Craugastoridae are in alphabetical order.

FIGURE 0.1 Topology of the families of Anura, extracted from a time-calibrated phylogenetic tree based on hundreds of loci. The families occurring in Ecuador are in red. The volume number in which the Ecuadorian families are included is indicated. Reprinted and modified from Portik *et al.* (2023) with permission from Elsevier.

Family and generic accounts include a section of contents. Each species account has the following structure:

- (1) The currently recognized taxon name followed by the name of author(s) and year of publication. The discoverers of a species are the authors who describe it in accordance with the rules of the International Code of Zoological Nomenclature. The parentheses indicates that the original name has suffered changes through its taxonomic history. The scientific nomenclature is based on Frost (2023), with a few exceptions noted under Remarks of the corresponding account. Sometimes, the publication date that appears in a publication is different from the valid date when the work actually was published. In such cases, both dates are indicated in the references.
- (2) The common name. The English standard common name, chosen by us, is provided. A compilation of these names is also given in Table 0.1. The Spanish standard common names, chosen by us, are indicated in Table 0.1. The Spanish name is not necessarily a translation of the English standard common name (see “Standardized Names in Spanish and English” in Chapter 1 in Volume I).
- (3) The original name, author(s), year of publication, and page number. This is followed by type(s) information with museum number(s) and locality data. Type locality data were ordered from specific locality to country. In some cases, the spelling or description of the locality was corrected. Additionally, locality information was updated when necessary, such as current provincial allocations. Coordinates were excluded from this section, except when the type locality was not in Ecuador. For the original citations of locality data see Frost (2023 and onward).
- (4) Synonym. If nomenclatural changes occurred to the original name, only the most recent modification to that name is included. The new name is followed by the author(s), year of publication, and page number. The synonymy information was primarily sourced from Frost (2023). For comprehensive and detailed lists of synonyms, please refer to his website hosted by The American Museum of Natural History. We opt not to incorporate subgenus names such as *Huicundomantis*.
- (5) Distribution color bar. This represents the altitudinal regions of Ecuador. The bold line below the bar indicates region of occurrence. From left to right: western tropical (0–1000 m), western subtropical (1001–2000 m), western temperate (2001–3000 m), high Andean (3001–4800 m), eastern temperate (2001–3000 m), eastern subtropical (1001–2000 m), eastern tropical (0–1000 m).
- (6) Etymology. When available, the etymological description in the original description is included. Otherwise, the intended meaning is interpreted, usually based on the Greek or Latin derivation. In a few cases, the vernacular name is also discussed.
- (7) Identification. Definition (family and genera). This section (diagnosis *sensu* Wiley and Lieberman, 2011) is intended to convey more than synapomorphies or autapomorphies and may include any characters useful in demonstrating that the taxon is different from other taxa. Thus, readers can identify members of the taxon in the most concise manner possible without having to consult more detailed descriptions. It provides the characteristics of the taxa, which alone or in combination help to distinguish the taxon from other taxa. Descriptions of the color are in life, unless otherwise indicated. When available, phenotypic synapomorphies for families and genera are described. This identification information is generally derived from the literature, which is indicated under Key references. The features used to characterize, diagnose, and distinguish vary according to the taxa, and we have nearly transcribed the characters used by the authors in the original descriptions or posterior taxonomic revisions. Nonetheless, in a few cases and if necessary, we did some rewriting, corrections, or added information. For several species, we offer information on known masses primarily derived from CJ data. Many of the characteristics of families are taken from Duellman and Trueb (1994), Frost *et al.* (2006), and especially from the compilation published by Vitt and Caldwell (2014), AmphibiaWeb (2022), and references cited therein, although in some cases, we updated the information. For nearly all genera, a microCT scan of the skeleton of a representative species is provided in dorsal and ventral views. Identifications of species are usually accompanied with plates depicting photos of the male and female, intraspecific variation, and morphological details. We use the following morphological abbreviations throughout the text: SVL = snout–vent length.
- (8) Comparisons. Similar species are listed at the beginning of the paragraph, followed by comparisons to each of them. The comparisons were primarily conducted with Ecuadorian taxa; however, in some instances, comparisons were extended to include species from neighboring countries.
- (9) Natural history. A synthesis of the most relevant aspects of these topics is provided, and the original sources or those that summarize them are mentioned under Key references. When relevant, collectors natural history data from specimens

deposited at CJ were added. The information of CJ number and collectors can be found in the CJ species and specimens database. CJ laboratory notes were also included for species that are maintained *ex situ*. Vocalizations are briefly described in this section, but a more complete account of vocalizations for each species is provided in the Appendix, under the subtitle “Vocalizations of Ecuadorian Craugastoridae.” Sources of call descriptions are also compiled in Table 0.2.

- (10) Distribution. The distribution range in Ecuador and in other countries is outlined. Then, the species is located in the Ecuadorian provinces, and the altitude ranges in which it has been recorded are indicated, along with the area of extinct of occurrence.

Sometimes, the altitudes measured in the field do not exactly match those obtained from the coordinates in the geographic layers we used (WorldClim. Ver 2.1., Fick and Hijmans, 2017), thus we generally report the altitudes provided in the original publication. In a separate paragraph, we specify the ecosystems and biogeographic sectors (Ministerio del Ambiente del Ecuador, 2013) where the species occurs, along with the average annual rainfall and temperature in their distributional ranges. We provide a compilation of the distribution of each of the species in the ecosystems (Tables 3 and 4) and biogeographic sectors (Table 5). Dots maps for each of the species are presented. We incorporated new distributional records, especially from the CJ collections, and corrected errors and made refinements on the level of precision of distribution records previously provided by Ortega-Andrade *et al.* (2021) (see more details under “The Red List of Ecuadorian Amphibians” in Chapter 3 in Volume I). The localities data used to build the maps are available at CJ.

- (11) Conservation. The IUCN category, source of species categorization, and its justification are specified, accompanied by supporting details regarding the conservation status (refer also to “The Red List of Ecuadorian Amphibians” in Chapter 3 in Volume I). Additionally, a comprehensive compilation of categorizations for all species can be found in Table 2. Information is provided regarding the occurrence in state (public) protected reserves, protected forests, biosphere reserves, and some private reserves. It is explicitly mentioned whether the species is listed in CITES.
- (12) Content (order, family, genus accounts). The number of genera and species worldwide is provided based on Frost (2023) and up to December 2023, and the number of species in Ecuador follows this Encyclopedia.
- (13) Remarks. Any pertinent information and comments not included in other sections are provided

herein. Additionally, if available, phylogenetic information and sources are provided in accounts for all taxa. Figures of phylogenetic trees including taxa not occurring in Ecuador (taken from the literature) are also given for many genera and some groups of species. Phylogenies published after December 2022, as well as recent molecular analyses and the phylogeny by Portik *et al.* (2023), are not included or discussed in the Encyclopedia, given that they were published after we ceased updating information, except where explicitly indicated. For example, we incorporated Strabomantidae within Craugastoridae, as suggested by Portik *et al.* (2023); we mentioned the papers by Franco-Mena *et al.* (2023) and Székely *et al.* (2023) only when strictly necessary. The family accounts include a time-calibrated maximum likelihood phylogenetic tree depicting the evolutionary relationships of Ecuadorian species inferred from DNA sequences of mitochondrial and nuclear genes. The updated phylogeny of the Ecuadorian amphibian taxa up to the end of 2021 (done by Juan C. Santos) was derived initially from alignments of the two largest phylogenetic reconstructions of amphibians to date (Pyron, 2014; Jetz and Pyron, 2018). The master alignments of both studies were appended, and taxa not found in Ecuador were removed; duplicate taxa were also removed by choosing the one with more sequence data, and taxonomic nomenclature was updated following AmphibiaWeb (2022). The final sequence alignment was realigned using DECIPHER (Wright, 2016) and manually reviewed and adjusted, particularly the mitochondrial ribosomal gene sequences. Multiple alignment programs were used to provide a good starting point, but adjustments were made by eye (Felsenstein, 2004; Baum and Smith, 2013). The optimized alignment was then used for the phylogenetic estimation of sections of the global phylogeny, a maximum likelihood tree was estimated using IQ-TREE2 2.1.3 (Minh *et al.*, 2020), and node time constraints followed those of previous studies (Pyron, 2014; Jetz and Pyron, 2018). In some sections of the tree of Ecuadorian amphibians, the topology among the families of Hyloidea was constrained to match those of more comprehensive analyses with hundreds to thousands of nuclear genes and no mitochondrial data (Feng *et al.*, 2017; Hime *et al.*, 2021).

- (14) Key references. This section presents references relevant to the Ecuadorian amphibian orders and species accounts. It is not intended to be an exhaustive list of publications but rather a selection of the most relevant ones. For a comprehensive

list of citations related to taxonomy, please refer to the most recent version of *Amphibian Species of the World* (Frost, 2023 and onward) or other revisionary works in specific fields. The references are presented in chronological order and include a brief description of the main topic covered. Additionally, authors of call descriptions are acknowledged. This section includes the references corresponding to information provided in most sections of the account, with the exception of the Conservation and Remarks sections, which have citations integrated throughout the text.

INSTITUTIONAL AND MUSEUM ABBREVIATIONS

Throughout the text, we use acronyms for institutions and museums. For museum abbreviations, see Frost (2023 and onward). The most commonly used museum or institutional abbreviations are:

CJ	Centro Jambatu de Investigación y Conservación de Anfibios, Ecuador.
DHMECN	División de Herpetología, Museo Ecuatoriano de Ciencias Naturales (part of INABIO, Instituto Nacional de Biodiversidad, Ecuador since 2017).
EPN	(museum) Escuela Politécnica Nacional, Museo de Zoología, Ecuador.
KU	University of Kansas, Museum of Natural History, Division of Herpetology, USA.
MCZ	Museum of Comparative Zoology, Harvard University, USA.
MHNG	Muséum d'histoire Naturelle, Geneva.
QCAZ	Museo de Zoología, Pontificia Universidad Católica del Ecuador.
ZSFQ	Universidad San Francisco de Quito, Museo de Zoología, Ecuador.
USNM	National Museum of Natural History, Division of Amphibians and Reptiles, USA.
MZUTI	Universidad Tecnológica Indoamérica, Museo de Zoología, Ecuador.

TABLE 0.1

List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume. See “Standardized names in Spanish and English” in Chapter 1 in Volume I.

<i>Barycholos pulcher</i>	Pretty rainfrog	Cutín bonito
<i>Craugastor longirostris</i>	Long-snouted rainfrog	Cutín de rostro largo
<i>Lynchius flavomaculatus</i>	Yellow-groin rainfrog	Cutín de ingles amarillas
<i>Lynchius megacephalus</i>	Big-headed rainfrog	Cutín cabeza grande
<i>Lynchius parkeri</i>	Parker's rainfrog	Cutín de Parker
<i>Lynchius simmonsii</i>	Simmons's rainfrog	Cutín de Simmons
<i>Niceforonia babax</i>	Chattering rainfrog	Cutín charlatán
<i>Niceforonia brunnea</i>	Brown rainfrog	Cutín café
<i>Niceforonia dolops</i>	Waterfall rainfrog	Cutín de cascada
<i>Niceforonia elassodiscus</i>	Small-pad rainfrog	Cutín de almohadilla pequeña
<i>Niceforonia nigrovittata</i>	Black-striped rainfrog	Cutín de rayas negras
<i>Niceforonia peraccai</i>	Peracca's rainfrog	Cutín de Peracca
<i>Noblella coloma</i>	Coloma's litter frog	Cutín hojarasquero de Coloma
<i>Noblella heyeri</i>	Heyer's litter frog	Cutín hojarasquero de Heyer
<i>Noblella lochites</i>	Imprisoned litter frog	Cutín hojarasquero preso
<i>Noblella mindo</i>	Mindo litter frog	Cutín hojarasquero de Mindo
<i>Noblella myrmecoides</i>	Ant litter frog	Cutín hojarasquero hormiga
<i>Noblella naturetrekii</i>	Naturetrek's litter frog	Cutín hojarasquero de Naturetrek
<i>Noblella personina</i>	Masked litter frog	Cutín hojarasquero enmascarado
<i>Noblella worleyae</i>	Worley's litter frog	Cutín de Worley
<i>Oreobates quixensis</i>	Quijos rainfrog	Cutín de Quijos
<i>Pristimantis acerus</i>	Plain rainfrog	Cutín sencillo
<i>Pristimantis achatinus</i>	Agate rainfrog	Cutín ágata
<i>Pristimantis actites</i>	Gualita rainfrog	Cutín gualita
<i>Pristimantis acuminatus</i>	Pointed-snout rainfrog	Cutín de hocico puntiagudo
<i>Pristimantis afrox</i>	Afro rainfrog	Cutín afro
<i>Pristimantis albuja</i>	Albuja's rainfrog	Cutín de Albuja
<i>Pristimantis allpapuyu</i>	Cloud-land rainfrog	Cutín de nubes
<i>Pristimantis almendariz</i>	Almendriz's rainfrog	Cutín de Almendáriz

TABLE 0.1 (Continued)**List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume See. “Standardized names in Spanish and English” in Chapter 1 in Volume I.**

<i>Pristimantis altamazonicus</i>	Upper Amazon rainfrog	Cutín del Alto Amazonas
<i>Pristimantis altamnis</i>	Headwaters rainfrog	Cutín de vertiente
<i>Pristimantis amaguanae</i>	Amaguaña's rainfrog	Cutín de Amaguaña
<i>Pristimantis anaiae</i>	Anaí's rainfrog	Cutín de Anaí
<i>Pristimantis andinodiabolus</i>	Andean devil rainfrog	Cutín diablo andino
<i>Pristimantis andinogigas</i>	Giant Andean rainfrog	Cutín gigante andino
<i>Pristimantis andinognomus</i>	Diminutive rainfrog	Cutín minúsculo
<i>Pristimantis anemerus</i>	Wild's rainfrog	Cutín de Wild
<i>Pristimantis apiculatus</i>	Small-tubercle rainfrog	Cutín tuberculoso pequeño
<i>Pristimantis appendiculatus</i>	Proboscis rainfrog	Cutín de piquito
<i>Pristimantis aquilonaris</i>	Northern Peru rainfrog	Cutín del Norte de Perú
<i>Pristimantis ardyae</i>	Ardy's rainfrog	Cutín de Ardy
<i>Pristimantis atillo</i>	Atillo rainfrog	Cutín de Atillo
<i>Pristimantis atratus</i>	Black-thighed rainfrog	Cutín de muslo negro
<i>Pristimantis aureolineatus</i>	Yellow-lined rainfrog	Cutín de línea amarilla
<i>Pristimantis balionotus</i>	Speckled rainfrog	Cutín manchado
<i>Pristimantis bambu</i>	Bamboo rainfrog	Cutín de bambú
<i>Pristimantis barrigai</i>	Barriga's rainfrog	Cutín de Barriga
<i>Pristimantis baryecuuus</i>	Deaf rainfrog	Cutín sordo
<i>Pristimantis bellae</i>	Bell's rainfrog	Cutín de Bell
<i>Pristimantis bicantus</i>	Two-note rainfrog	Cutín de dos notas
<i>Pristimantis brevicrus</i>	Short-legged rainfrog	Cutín de patas cortas
<i>Pristimantis bromeliaceus</i>	Bromeliad rainfrog	Cutín bromelícola
<i>Pristimantis buckleyi</i>	Buckley's rainfrog	Cutín de Buckley
<i>Pristimantis buenaventura</i>	Buenaventura rainfrog	Cutín de Buenaventura
<i>Pristimantis burtoniorum</i>	Burton's rainfrog	Cutín de Burton
<i>Pristimantis caeruleonotus</i>	Blue-spotted rainfrog	Cutín de manchas azules
<i>Pristimantis cajamarcensis</i>	Cajamarca rainfrog	Cutín de Cajamarca
<i>Pristimantis cajanuma</i>	Cajanuma rainfrog	Cutín de Cajanuma
<i>Pristimantis calcarulatus</i>	Small-calcar rainfrog	Cutín de calcar pequeño
<i>Pristimantis caniari</i>	Cañari rainfrog	Cutín cañari
<i>Pristimantis caprifer</i>	Chevron-backed rainfrog	Cutín de dorso chevron
<i>Pristimantis carlosceroni</i>	Cerón's rainfrog	Cutín de Cerón
<i>Pristimantis carvalhoi</i>	Carvalho's rainfrog	Cutín de Carvalho
<i>Pristimantis cedros</i>	Los Cedros rainfrog	Cutín de Los Cedros
<i>Pristimantis celator</i>	Hider rainfrog	Cutín escondedor
<i>Pristimantis chalceus</i>	Brass rainfrog	Cutín de bronce
<i>Pristimantis chloronotus</i>	Green-backed rainfrog	Cutín de dorso verde
<i>Pristimantis chocoensis</i>	Chocó rainfrog	Cutín del Chocó
<i>Pristimantis chomskyi</i>	Chomsky's rainfrog	Cutín de Chomsky
<i>Pristimantis churuwiai</i>	Churuwia's rainfrog	Cutín de Churuwia
<i>Pristimantis cisnerosi</i>	Cisneros' rainfrog	Cutín de Cisneros
<i>Pristimantis citriogaster</i>	Yellow-bellied rainfrog	Cutín de vientre amarillo
<i>Pristimantis colodactylus</i>	Short-fingered rainfrog	Cutín de dedos cortos
<i>Pristimantis colomai</i>	Coloma's rainfrog	Cutín de Coloma
<i>Pristimantis colonensis</i>	Colón rainfrog	Cutín de Colón
<i>Pristimantis condor</i>	Cóndor rainfrog	Cutín del Cóndor
<i>Pristimantis conspicillatus</i>	Amazonian rainfrog	Cutín amazónico
<i>Pristimantis cremnobates</i>	Cliff-dwelling rainfrog	Cutín de acantilado
<i>Pristimantis crenunguis</i>	Giant rainfrog	Cutín gigante
<i>Pristimantis croceinguinis</i>	Colorful groin rainfrog	Cutín de ingle colorida

TABLE 0.1 (Continued)

List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume. See “Standardized names in Spanish and English” in Chapter 1 in Volume I.

<i>Pristimantis crucifer</i>	Cross-like rainfrog	Cutín en forma de cruz
<i>Pristimantis cryophilus</i>	Cold rainfrog	Cutín frío
<i>Pristimantis cryptomelas</i>	Hidden black rainfrog	Cutín con negro oculto
<i>Pristimantis curtipes</i>	Short-footed rainfrog	Cutín de pies cortos
<i>Pristimantis daquilemai</i>	Daquilema’s rainfrog	Cutín de Daquilema
<i>Pristimantis degener</i>	Different rainfrog	Cutín diferente
<i>Pristimantis delius</i>	Delius’ rainfrog	Cutín de Delius
<i>Pristimantis devillei</i>	Deville’s rainfrog	Cutín de Deville
<i>Pristimantis diadematus</i>	Crowned rainfrog	Cutín coronado
<i>Pristimantis dissimulatus</i>	Bright-colored rainfrog	Cutín resplandeciente
<i>Pristimantis duellmani</i>	Duellman’s rainfrog	Cutín de Duellman
<i>Pristimantis ecuadorensis</i>	Ecuadorian rainfrog	Cutín ecuatoriano
<i>Pristimantis enigmaticus</i>	Obscure rainfrog	Cutín oscuro
<i>Pristimantis eremitus</i>	Solitary rainfrog	Cutín solitario
<i>Pristimantis eriphus</i>	Bleating rainfrog	Cutín balador
<i>Pristimantis ernesti</i>	Williams’ rainfrog	Cutín de Williams
<i>Pristimantis erythros</i>	Blood-red rainfrog	Cutín rojo sangre
<i>Pristimantis esmeraldas</i>	Esmeraldas rainfrog	Cutín de Esmeraldas
<i>Pristimantis eugeniae</i>	Del Pino’s rainfrog	Cutín de Del Pino
<i>Pristimantis exoristus</i>	Exiled rainfrog	Cutín exiliado
<i>Pristimantis festae</i>	Festa’s rainfrog	Cutín de Festa
<i>Pristimantis floridus</i>	Flores’ rainfrog	Cutín de Flores
<i>Pristimantis gagliardoi</i>	Gagliardo’s rainfrog	Cutín de Gagliardo
<i>Pristimantis galdi</i>	Gald’s rainfrog	Cutín de Gald
<i>Pristimantis ganonotus</i>	Green rainfrog	Cutín verde
<i>Pristimantis gentryi</i>	Gentry’s rainfrog	Cutín de Gentry
<i>Pristimantis gladiator</i>	Swordsman rainfrog	Cutín espadachín
<i>Pristimantis glandulosus</i>	Glandular rainfrog	Cutín glandular
<i>Pristimantis glendae</i>	Glenda’s rainfrog	Cutín de Glenda
<i>Pristimantis gloria</i>	Gloria’s rainfrog	Cutín de Gloria
<i>Pristimantis gralarias</i>	Gralarias rainfrog	Cutín de Gralarias
<i>Pristimantis gualaceno</i>	Gualaceño rainfrog	Cutín del Gualaceño
<i>Pristimantis hamiotae</i>	Miyata’s rainfrog	Cutín de Miyata
<i>Pristimantis hampatusami</i>	Hampatusami rainfrog	Cutín hampatusami
<i>Pristimantis hectus</i>	Six-toed rainfrog	Cutín de seis dedos
<i>Pristimantis huicundo</i>	Huicundo rainfrog	Cutín de huicundo
<i>Pristimantis ignicolor</i>	Red-groined rainfrog	Cutín de ingle roja
<i>Pristimantis illotus</i>	Dirty rainfrog	Cutín sucio
<i>Pristimantis incanus</i>	Hoary rainfrog	Cutín ceniciento
<i>Pristimantis incomptus</i>	Unadorned rainfrog	Cutín poco llamativo
<i>Pristimantis inusitatus</i>	Uncommon rainfrog	Cutín raro
<i>Pristimantis jimenezi</i>	Jiménez de la Espada’s rainfrog	Cutín de Jiménez de la Espada
<i>Pristimantis katoptroides</i>	Mirror rainfrog	Cutín espejo
<i>Pristimantis kichwarum</i>	Kichwa rainfrog	Cutín Kichwa
<i>Pristimantis kirklandi</i>	Kirkland’s rainfrog	Cutín de Kirkland
<i>Pristimantis kunam</i>	Kunam’s rainfrog	Cutín de Kunam
<i>Pristimantis kuri</i>	El Oro rainfrog	Cutín de El Oro
<i>Pristimantis labiosus</i>	Large-lipped rainfrog	Cutín labioso
<i>Pristimantis lacrimosus</i>	Tearful rainfrog	Cutín llorón
<i>Pristimantis lanthanites</i>	Hidden rainfrog	Cutín ocultador
<i>Pristimantis latericius</i>	Orange rainfrog	Cutín anaranjado

TABLE 0.1 (Continued)

List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume. See “Standardized names in Spanish and English” in Chapter 1 in Volume I.

<i>Pristimantis laticlavus</i>	Broad-striped rainfrog	Cutín de rayas anchas
<i>Pristimantis latidiscus</i>	Broad-disked rainfrog	Cutín de disco ancho
<i>Pristimantis ledzeppelin</i>	Led Zeppelin’s rainfrog	Cutín de Ledzeppelin
<i>Pristimantis leoni</i>	León’s rainfrog	Cutín de León
<i>Pristimantis leucopus</i>	White-footed rainfrog	Cutín de pies blancos
<i>Pristimantis librarius</i>	Librarians’ rainfrog	Cutín de bibliotecarios
<i>Pristimantis limoncochensis</i>	Limoncocha rainfrog	Cutín de Limoncocha
<i>Pristimantis lividus</i>	Bluish-groined rainfrog	Cutín de ingle azulgrisácea
<i>Pristimantis llanganati</i>	Llanganati rainfrog	Cutín de Llanganati
<i>Pristimantis lojanus</i>	Loja rainfrog	Cutín de Loja
<i>Pristimantis loujosti</i>	Jost’s rainfrog	Cutín de Jost
<i>Pristimantis loustes</i>	Spray zone rainfrog	Cutín de rocío
<i>Pristimantis lucidosignatus</i>	Pale-spotted rainfrog	Cutín de puntos pálidos
<i>Pristimantis luscombei</i>	Luscombe’s rainfrog	Cutín de Luscombe
<i>Pristimantis luteolateralis</i>	Yellow-spotted rainfrog	Cutín de puntos amarillos
<i>Pristimantis lutzae</i>	Lutz’s rainfrog	Cutín de Lutz
<i>Pristimantis lymani</i>	Lyman’s rainfrog	Cutín de Lyman
<i>Pristimantis malkini</i>	Malkin’s rainfrog	Cutín de Malkin
<i>Pristimantis mallii</i>	Malli’s rainfrog	Cutín de Malli
<i>Pristimantis marcoreyesi</i>	Reyes’ rainfrog	Cutín de Reyes
<i>Pristimantis martiae</i>	Crump’s rainfrog	Cutín de Crump
<i>Pristimantis maryanneae</i>	Maryanne’s rainfrog	Cutín de Maryanne
<i>Pristimantis matidiktyo</i>	Reticulated eye rainfrog	Cutín de ojos reticulados
<i>Pristimantis matildae</i>	Matilde’s rainfrog	Cutín de Matilde
<i>Pristimantis mazar</i>	Mazar rainfrog	Cutín de Mazar
<i>Pristimantis metabates</i>	Leaping rainfrog	Cutín saltarín
<i>Pristimantis miktos</i>	Blended rainfrog	Cutín mezclado
<i>Pristimantis miltongallardoi</i>	Milton Gallardo’s rainfrog	Cutín de Milton Gallardo
<i>Pristimantis mindo</i>	Mindo rainfrog	Cutín de Mindo
<i>Pristimantis minimus</i>	Minute rainfrog	Cutín minúsculo
<i>Pristimantis modipeplus</i>	Modest rainfrog	Cutín modesto
<i>Pristimantis morlaco</i>	Morlaco rainfrog	Cutín morlaco
<i>Pristimantis multicolor</i>	Multicolored rainfrog	Cutín multicolor
<i>Pristimantis munoz</i>	Muñoz’s rainfrog	Cutín de Muñoz
<i>Pristimantis muranunka</i>	Muranunka rainfrog	Cutín de muranunka
<i>Pristimantis muricatus</i>	Tubercular rainfrog	Cutín tubercular
<i>Pristimantis mutabilis</i>	Mutable rainfrog	Cutín mutable
<i>Pristimantis myersi</i>	Myers’ rainfrog	Cutín de Myers
<i>Pristimantis nangaritza</i>	Nangaritza rainfrog	Cutín de Nangaritza
<i>Pristimantis nankints</i>	Nankints rainfrog	Cutín de Nankints
<i>Pristimantis nanus</i>	Dwarf rainfrog	Cutín enano
<i>Pristimantis nelsongallo</i>	Nelson Gallo’s rainfrog	Cutín de Nelson Gallo
<i>Pristimantis nephophilus</i>	Cloud-loving rainfrog	Cutín nefelófilo
<i>Pristimantis nietoi</i>	Nieto’s rainfrog	Cutín de Nieto
<i>Pristimantis nigrogriseus</i>	Black–gray rainfrog	Cutín grisáceo
<i>Pristimantis nimbus</i>	Cloud forest rainfrog	Cutín de bosque nuboso
<i>Pristimantis nyctophylax</i>	Watchman rainfrog	Cutín guardián
<i>Pristimantis ocellatus</i>	Ocellated rainfrog	Cutín ocelado
<i>Pristimantis ocreatus</i>	Booted rainfrog	Cutín de guantes
<i>Pristimantis omarrhynchus</i>	Omarrhynchus’ rainfrog	Cutín de Omarrhynchus
<i>Pristimantis omeviridis</i>	Green forest rainfrog	Cutín del bosque verde

TABLE 0.1 (Continued)

List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume. See “Standardized names in Spanish and English” in Chapter 1 in Volume I.

<i>Pristimantis onorei</i>	Onore’s rainfrog	Cutín de Onore
<i>Pristimantis orcesi</i>	Orcés’ rainfrog	Cutín de Orcés
<i>Pristimantis orestes</i>	Mountaineer rainfrog	Cutín montañero
<i>Pristimantis ornatissimus</i>	Most beautiful rainfrog	Cutín hermosísimo
<i>Pristimantis orphnolaimus</i>	Dusky-throated rainfrog	Cutín de garganta oscura
<i>Pristimantis ortizi</i>	Ortiz’s rainfrog	Cutín de Ortiz
<i>Pristimantis pahuma</i>	Pahuma rainfrog	Cutín de Pahuma
<i>Pristimantis paquisha</i>	Paquisha rainfrog	Cutín de Paquisha
<i>Pristimantis parvillus</i>	Small rainfrog	Cutín pequeño
<i>Pristimantis pastazensis</i>	Pastaza rainfrog	Cutín de Pastaza
<i>Pristimantis pataikos</i>	Pataikos rainfrog	Cutín de Pataikos
<i>Pristimantis paululus</i>	Tiny rainfrog	Cutín diminuto
<i>Pristimantis pecki</i>	Peck’s rainfrog	Cutín de Peck
<i>Pristimantis percultus</i>	Adorned rainfrog	Cutín adornado
<i>Pristimantis peruvianus</i>	Peruvian rainfrog	Cutín peruano
<i>Pristimantis petersi</i>	Peters’ rainfrog	Cutín de Peters
<i>Pristimantis petersioides</i>	James Peters’ rainfrog	Cutín de James Peters
<i>Pristimantis philipi</i>	Philip’s rainfrog	Cutín de Philip
<i>Pristimantis phoxocephalus</i>	Pointed-head rainfrog	Cutín de cabeza puntiaguda
<i>Pristimantis pichincha</i>	Pichincha rainfrog	Cutín de Pichincha
<i>Pristimantis pinchaque</i>	Pinchaque rainfrog	Cutín pinchaque
<i>Pristimantis pramukae</i>	Pramuk’s rainfrog	Cutín de Pramuk
<i>Pristimantis prolatus</i>	Long-headed rainfrog	Cutín de cabeza larga
<i>Pristimantis proserpens</i>	Non-jumping rainfrog	Cutín no saltarín
<i>Pristimantis pseudoacuminatus</i>	Pseudoacuminate rainfrog	Cutín pseudoacuminado
<i>Pristimantis pteridophilus</i>	Fern-lover rainfrog	Cutín filofílico
<i>Pristimantis pugnax</i>	Fighter rainfrog	Cutín luchador
<i>Pristimantis punzan</i>	Punzan rainfrog	Cutín de Punzan
<i>Pristimantis puruscafeum</i>	Puro Coffee’s rainfrog	Cutín Puro Coffee
<i>Pristimantis pycnodermis</i>	Thick-skinned rainfrog	Cutín de piel gruesa
<i>Pristimantis pyrrhomerus</i>	Red-thighed rainfrog	Cutín de muslos rojos
<i>Pristimantis quaquaversus</i>	Variable rainfrog	Cutín variable
<i>Pristimantis quinquagesimus</i>	Bill’s rainfrog	Cutín de Bill
<i>Pristimantis quintana</i>	Quintana’s rainfrog	Cutín de Quintana
<i>Pristimantis resistencia</i>	Resistance rainfrog	Cutín de resistencia
<i>Pristimantis rhodoplichus</i>	Pink-thighed rainfrog	Cutín de muslos rosados
<i>Pristimantis rhodostichus</i>	Pink-lined rainfrog	Cutín de líneas rosadas
<i>Pristimantis riveti</i>	Rivet’s rainfrog	Cutín de Rivet
<i>Pristimantis romanorum</i>	Román’s rainfrog	Cutín de Román
<i>Pristimantis romeroae</i>	Romero’s rainfrog	Cutín de Romero
<i>Pristimantis roni</i>	Ron’s rainfrog	Cutín de Ron
<i>Pristimantis rosadoi</i>	Rosado’s rainfrog	Cutín de Rosado
<i>Pristimantis rubicundus</i>	Ruddy rainfrog	Cutín sonrosado
<i>Pristimantis rufioculis</i>	Red-eyed rainfrog	Cutín de ojos rojos
<i>Pristimantis rufoviridis</i>	Greenish-red rainfrog	Cutín verde rojizo
<i>Pristimantis ruidus</i>	Rough-skinned rainfrog	Cutín rugoso
<i>Pristimantis sacharuna</i>	Sacharuna rainfrog	Cutín sacharuna
<i>Pristimantis samaniegoi</i>	Samaniego’s rainfrog	Cutín de Samaniego
<i>Pristimantis sambalan</i>	Sambalán rainfrog	Cutín de Sambalán
<i>Pristimantis saturninoi</i>	Father Saturnino’s rainfrog	Cutín del Padre Saturnino

TABLE 0.1 (Continued)

List of Suggested Common Names in English and Spanish for the 281 Species of Ecuadorian Amphibians Included in This Volume. See “Standardized names in Spanish and English” in Chapter 1 in Volume I.

<i>Pristimantis schultei</i>	Schulte's rainfrog	Cutín de Schulte
<i>Pristimantis scolodiscus</i>	Pointed-disc rainfrog	Cutín de disco punteado
<i>Pristimantis serendipitus</i>	Fortuitous rainfrog	Cutín afortunado
<i>Pristimantis simonbolivari</i>	Bolívar's rainfrog	Cutín de Bolívar
<i>Pristimantis sirnigeli</i>	Simpson's rainfrog	Cutín de Simpson
<i>Pristimantis skydmainos</i>	Frowning rainfrog	Cutín ceñudo
<i>Pristimantis sobetes</i>	Elf rainfrog	Cutín elfo
<i>Pristimantis spinosus</i>	Spiny rainfrog	Cutín espinoso
<i>Pristimantis sternothylax</i>	Pectoral-sacked rainfrog	Cutín de saco pectoral
<i>Pristimantis subsigillatus</i>	Ornate-flank rainfrog	Cutín de flancos adornados
<i>Pristimantis supernatis</i>	High-Andean forest rainfrog	Cutín de bosque altoandino
<i>Pristimantis surdus</i>	Silent rainfrog	Cutín silencioso
<i>Pristimantis tamia</i>	Tamia's rainfrog	Cutín de Tamia
<i>Pristimantis tenebrionis</i>	Darkness-lover rainfrog	Cutín amante de la oscuridad
<i>Pristimantis teslai</i>	Tesla's rainfrog	Cutín de Tesla
<i>Pristimantis thymalopsoides</i>	Orange-dotted rainfrog	Cutín de puntos naranjas
<i>Pristimantis thymelensis</i>	Frailejón rainfrog	Cutín de Frailejón
<i>Pristimantis tiktik</i>	Tiktik rainfrog	Cutín tiktik
<i>Pristimantis tinajillas</i>	Tinajillas rainfrog	Cutín de Tinajillas
<i>Pristimantis tinguichaca</i>	Tinguichaca rainfrog	Cutín de Tinguichaca
<i>Pristimantis torresi</i>	Torres' rainfrog	Cutín de Torres
<i>Pristimantis totoroi</i>	Totoras rainfrog	Cutín de Totoras
<i>Pristimantis trachyblepharis</i>	Rough-eyelid rainfrog	Cutín de párpado rugoso
<i>Pristimantis truebae</i>	Trueb's rainfrog	Cutín de Trueb
<i>Pristimantis tungurahua</i>	Tungurahua rainfrog	Cutín de Tungurahua
<i>Pristimantis ujucami</i>	Ujukam's rainfrog	Cutín de Ujukam
<i>Pristimantis unistrigatus</i>	Cuico rainfrog	Cutín Cuico
<i>Pristimantis variabilis</i>	Variable amazonian rainfrog	Cutín amazónico variable
<i>Pristimantis venegasi</i>	Venegas' rainfrog	Cutín de Venegas
<i>Pristimantis ventrimarmoratus</i>	Marbled-belly rainfrog	Cutín de vientre marmoleado
<i>Pristimantis ventristellatus</i>	Ventristellatus rainfrog	Cutín de vientre estrellado
<i>Pristimantis verecundus</i>	Shy rainfrog	Cutín tímido
<i>Pristimantis verrucolatus</i>	Warty-flank rainfrog	Cutín con flancos verrugosos
<i>Pristimantis versicolor</i>	Variiegated rainfrog	Cutín variado
<i>Pristimantis vertebralis</i>	Vertebral rainfrog	Cutín vertebralis
<i>Pristimantis vidua</i>	Widow rainfrog	Cutín viudo
<i>Pristimantis w-nigrum</i>	Black-w rainfrog	Cutín gualita
<i>Pristimantis walkeri</i>	Walker's rainfrog	Cutín de Walker
<i>Pristimantis waorani</i>	Waorani rainfrog	Cutín Waorani
<i>Pristimantis yanezi</i>	Yáñez's rainfrog	Cutín de Yáñez
<i>Pristimantis yantzaza</i>	Yantzaza rainfrog	Cutín de Yantzaza
<i>Pristimantis yumbo</i>	Yumbo rainfrog	Cutín Yumbo
<i>Strabomantis anatipes</i>	Webbed broad-headed rainfrog	Cutín cabezón palmeado
<i>Strabomantis anomalus</i>	Disc-less broad-headed rainfrog	Cutín cabezón sin disco
<i>Strabomantis cerastes</i>	Horned broad-headed rainfrog	Cutín cabezón cornudo
<i>Strabomantis cornutus</i>	Crowned broad-headed rainfrog	Cutín cabezón con cuernos
<i>Strabomantis helonotus</i>	Warty broad-headed rainfrog	Cutín cabezón verrugoso
<i>Strabomantis necerus</i>	Hornless broad-headed rainfrog	Cutín cabezón sin cuernos
<i>Strabomantis sulcatus</i>	Grooved broad-headed rainfrog	Cutín cabezón con surcos

TABLE 0.2

Summary of Endemism, Red List Categories, and Citations of References for Which Call Descriptions of 281 Species of Craugastoridae from Ecuador Have Been Published. Call descriptions are the ones that include quantitative data. Information on calls is given under accounts and in the Appendix “Vocalizations of Ecuadorian Craugastoridae.” End = Endemism, E = endemic, CR = Critically Endangered, CR (PE) = Critically Endangered (Possibly Extinct), EN = Endangered, DD = Data Deficient, LC = Least Concern, NT = Near Threatened, VU = Vulnerable.

Species	End	Red List	Call References
<i>Barycholos pulcher</i>	E	LC	Non-described
