# About the Author

**Jason Hollowell** is an English language teacher and educational program administrator. As a university student, Jason studied Political Science with the intention of proceeding to law school and becoming a lawyer. When he studied abroad in Japan, prior to his senior year in university, that plan changed and he returned to complete his university degree and then promptly headed back to Japan to learn more about its fascinating language and culture, never to consider law again. It was the beginning of a series of rewarding experiences that include working as a technical translator and interpreter for both Mitsubishi and Toyota Motors, earning a Masters Degree in Second Language Studies from the University of Hawaii, working for the University of Hawaii and then for Nihon University in Japan where he is now employed as an Associate Professor of English and the Director of the English Language Program. He has been involved in online education programs through the development of a SLOAN Foundation funded English writing program and, since 2004, has been an avid user of Moodle. Jason subscribes to the constructivist principles upon which Moodle was founded and has developed a working knowledge of PHP, MySQL, and Apache through many hours of experimentation and countless visits to online forums, especially those hosted on the [Moodle.org](http://Moodle.org) website.

# Acknowledgement

No book is the product of just the author—he just happens to be the one with his name on the cover.

Many people contributed to the success of this book, and it would take more space than I have to thank each one individually.

A very special thanks goes to Sarah Cullington, my editor, who is the reason that this book exists. Thank you, Sarah, for understanding the idea and helping me to develop it into something worthy of print, and for being a wonderful guide through this process. Thank you also to the entire Packt Publishing team for working so diligently to help bring out a high quality product.

I would also like to thank those people who helped me, with support, ideas, and feedback, as I experimented with Moodle as an educational program administration tool. They include Richard McMahon, Jason Myrick, George Harrison, and Yusuke Itamiya. A special thanks also goes out to Hiroko Nagasawa, without your help I would never have been able to get the grant funding that made the registration enrollment plugin, which was the final motivation to write this book, possible.

The many users of Moodle who participate in the forums on the `Moodle.org` site also deserve a very heartfelt thanks. You helped me discover the possibilities Moodle has to offer and rescued me when I got lost as I experimented and explored.

Finally, I must thank Martin Dougiamas for the amazing contribution he has made to education through his brainchild, Moodle!

# About the Reviewers

**Anthony Borrow, S.J** is a Jesuit of the New Orleans Province who has been active in the Moodle community for the past five years. Anthony has an M.A. degree in Counseling from Saint Louis University and a Masters of Divinity from the Jesuit School of Theology of Santa Clara University. Anthony has worked on the design and implementation of various database systems since 1992.

Anthony serves the Moodle community as its CONTRIB Coordinator. In that role, Anthony has presented at various MoodleMoots (conferences) across the United States and provided in-house training opportunities for institutions learning how to implement Moodle. Anthony has taught at Dallas Jesuit College Preparatory and provides technical advise to the Jesuit Secondary Education Association (<http://jsea.org>) and the Jesuit Virtual Learning Academy (<http://jvla.org/>). Anthony is currently serving the community at Cristo Rey Jesuit College Preparatory of Houston (<http://cristoreyjesuit.org>) as their Campus Minister.

He is the co-author of the Honduras chapter of *Teen Gangs: A Global View*. He has also been the technical reviewer of various Packt books (0141, 1001, 1902, 4244).

---

I am grateful to the Moodle community for continually inspiring me to learn more about educational technologies and fostering an environment where every voice contributes to building that community.

---

**Brian Mattson** is a history teacher from Lapeer, Michigan with a passion for Moodle and its use in both blended and remote learning environments. After teaching at an American school in Torreon, Mexico for four years he moved to Bulgaria where he and his colleagues pioneered the use of Moodle at the Anglo American School of Sofia. Currently he resides in Amsterdam, the Netherlands where he runs a Moodle consulting business that provides training and workshops for international schools throughout Europe and beyond. He can be contacted at [mattso13@iteach.org](mailto:mattso13@iteach.org).

---

I would like to thank two members of the Anglo American School of Sofia; Linda Dimitrov for her past and continued assistance with all things technical, and Jim Leahy who has provided me with constant encouragement in my professional endeavors. I am also grateful to all the students at the Anglo American School of Sofia who taught me as much as I taught them. Finally a special thanks to my wife Anette and my son Tijs for everything.

---

**Kent Villard** is a twenty-year veteran of the IT industry and currently is the E-Learning Coordinator for the University of Prince Edward Island. He has been administering Moodle for almost five years. Kent particularly enjoys the process of converting traditional curriculum to work in an online form. He has acted as a technical reviewer for Packt on *Moodle 1.9 for Design and Technology* and *Moodle 1.9 Teaching Techniques*.

When not administering Moodle or evangelizing the Mac platform, Kent can be found spending quality time with his beautiful wife Denise and awesome kids, Maxwell and Samantha.

Kent lives in Cornwall, Prince Edward Island in Atlantic Canada. He can be reached at [kent.villard@gmail.com](mailto:kent.villard@gmail.com).

Do you need instant solutions to your IT questions? PacktLib is Packt's online digital book library. Here, you can access, read and search across Packt's entire library of books.

## Why Subscribe?

- Fully searchable across every book published by Packt
- Copy and paste, print and bookmark content
- On demand and accessible via web browser

## Free access for Packt account holders

If you have an account with Packt at [www.PacktPub.com](http://www.PacktPub.com), you can use this to access PacktLib today and view nine entirely free books. Simply use your login credentials for immediate access.

*My wife Hitomi, you fulfill me with peace, love, and happiness; my daughter Hana, you are my sunshine and my daily reminder of the beauty of life.*

*This book would not have been possible without your love and understanding.*

*Thank you from the bottom of my heart. 愛しているよ!*

# Table of Contents

<b>Preface</b>	<b>1</b>
<b>Chapter 1: Welcome to Moodle as a Curriculum and Information Management System (CIMS)!</b>	<b>5</b>
<b>What is Moodle?</b>	<b>5</b>
A VLE, LMS, and CMS	6
<b>Using Moodle as a CIMS</b>	<b>6</b>
<b>Installing Moodle</b>	<b>7</b>
<b>Installing MAMP and XAMPP packages</b>	<b>8</b>
<b>Time for action – installing the Mac OS X package</b>	<b>8</b>
<b>Time for action – installing the Windows package</b>	<b>10</b>
<b>Basic setup and customization of your Moodle site</b>	<b>18</b>
<b>Time for action – basic customization</b>	<b>19</b>
<b>Time for action – customizing the label area of the front page</b>	<b>23</b>
<b>Time for action – adding the Main Menu block</b>	<b>26</b>
<b>Installing third party contributions</b>	<b>27</b>
Blocks and modules	27
<b>Time for action – installing the My Courses block</b>	<b>28</b>
<b>Time for action – installing the Attendance package</b>	<b>31</b>
<b>Installing other plugins (themes)</b>	<b>34</b>
<b>Time for action – installing the Aardvark Pro original theme</b>	<b>34</b>
<b>Summary</b>	<b>37</b>
<b>Chapter 2: Building the Foundation—Creating Categories and Courses</b>	<b>39</b>
<b>Course categories</b>	<b>40</b>
Manual creation of course categories	40
<b>Time for action – manually creating course categories</b>	<b>40</b>
<b>Teacher account creation</b>	<b>46</b>
<b>Time for action – creating teacher accounts</b>	<b>46</b>
<b>Using the Bulk Course Upload tool</b>	<b>52</b>

Time for action – installing the Bulk Course Upload tool	53
Summary	61
<b>Chapter 3: Student Account Creation and Enrollment</b>	<b>63</b>
Bulk account creation and course enrollment	64
Time for action – enrolling students when creating their accounts	64
Time for action – checking the enrollment status from the course context	70
Time for action – checking enrollment status from the user's profile page	73
Bulk enrollment for existing users	76
Time for action – preparing the CSV file	76
Time for action – enroll existing users	77
Other enrollment options	80
Enrollment plugins	81
CIMS enrollment review	84
Summary	84
<b>Chapter 4: Incorporating Educational Standards</b>	<b>85</b>
Implementing standard policies and procedures in your Moodle site	85
Attendance standards	86
Bulk setup of the attendance module	86
Time for action – creating a template course	87
Time for action – setting up the attendance template	89
Time for action – importing the attendance template to other courses	94
Grading standards	98
Time for action – creating a standard grading scale	98
Time for action – creating a Gradebook template	100
Time for action – preparing the target course	103
Time for action – importing the Gradebook template	104
Implementing a final grade submission process	105
The policy	106
The process	106
Time for action – locking courses for grade retrieval	107
Setting up a program-wide testing procedure	109
Time for action – an exam administered outside of Moodle	109
An exam administered via the Moodle quiz module	113
Summary	113
<b>Chapter 5: Enabling your Moodle Site to Function as an Information Portal</b>	<b>115</b>
Modifying display settings	116
Time for action – removing course lists from the category page	116
Time for action – increasing the detailed summary setting	119
Time for action – increasing the number of courses displayed in a user's profile	121

---

Expanding content display possibilities	122
Time for action – installation of Content Pages block	122
Time for action – customizing the Content Pages block	126
Customization of third party themes	128
Time for action – customizing the menu bar	129
Time for action – customizing the submenus	130
Time for action – adding links to the submenu items	132
Time for action – adjusting the display style of the Content Pages admin block	134
Pages admin block	134
Time for action – customizing the logo	136
Summary	137
<b>Chapter 6: Customized Roles</b>	<b>139</b>
Permissions and roles	140
Creating a censored student role	142
Time for action – creating and using a censored student role	142
Assistant administrator role	146
Time for action – creating and using an assistant administrator role	146
Time for action – testing the role	148
Administrative monitor role	152
Time for action – creating and using an administrative monitor role	153
Time for action – assigning and testing the role	154
The Mentor, Advisor, and Parental Monitor role	157
Time for action – creating and using the Parental Monitor role	157
Time for action – creating a new account and assigning the role to it	158
Time for action – installing the Mentees block	161
Time for action – checking the role functionality	163
Summary	166
<b>Chapter 7: Advanced Data Access and Display</b>	<b>167</b>
The Enhanced User Administration block	168
Time for action – installation and use of the Enhanced User Admin block	168
Installation and use of PHPMyAdmin	173
Time for action – installing and using PHPMyAdmin	173
Installation and basic use of the Custom SQL query tool	176
Time for action – install and experiment with the Custom SQL query tool	176
SQL queries	178
Time for action – creating a sample query	178
Installation and basic setup of the embedded Xataface database application	181
Time for action – installation and basic setup of Xataface	181
Time for action – setup of our Xataface application	186

Time for action – limiting database table access	190
Time for action – another Xataface security measure	192
Summary	195
<b>Chapter 8: Setting Up a Mini SIS</b>	<b>197</b>
Custom user profile fields	198
Time for action – setting up a user profile field for assessment test scores	198
Time for action – a profile field for program enrollment information	201
Time for action – populating the fields	202
Using the user profile fields as the search criteria	206
Time for action – searching using the Bulk user actions tool	206
Time for action – searching using PHPMyAdmin	209
The Xataface database 'backside' application	211
Time for action – customizing the Xataface table display	212
Time for action – setting up relationships in Xataface	215
Time for action – using Xataface to modify core Moodle data	218
Time for action – Xataface as an enrollment table maintenance tool	222
Summary	225
<b>Chapter 9: Promoting Efficient Communication</b>	<b>227</b>
Using Moodle as a hub for internal information distribution, collaboration, and communication	228
Facilitating intra- or inter-departmental or program communication, collaboration, and information flow	228
Time for action – setting up the meta course	229
Time for action – creating a group inside the meta course	231
Time for action – setting up the forums inside the meta course	234
Building a mentor, homeroom, advisor, or counselor system	237
Time for action – setting up a mentor, advisor, or counseling system	238
Feedback systems—using the questionnaire module	243
Time for action – installing and using the questionnaire module	243
Summary	249
<b>Chapter 10: Advanced Enrollment Plugin</b>	<b>251</b>
Introducing the Registration Enrollment plugin	252
Time for action – installing the Registration Enrollment plugin	252
Time for action – creating and populating the user profile fields	253
Time for action – setting up the Registration Enrollment plugin (default site-wide settings)	256
Time for action – registration enrollment system settings (course level)	261
Testing the Registration Enrollment plugin	264
Time for action – testing the priority enrollment period setting for an eligible student	264

<b>Time for action – testing the priority enrollment period for an ineligible student</b>	<b>267</b>
<b>Time for action – testing the Registration Enrollment plugin for a non-eligible student</b>	<b>268</b>
<b>Time for action – testing the course capacity setting of the Registration Enrollment plugin</b>	<b>269</b>
<b>Time for action – testing the Registration Enrollment plugin base criteria</b>	<b>270</b>
<b>Time for action – testing the Registration Enrollment plugin after the period has ended</b>	<b>271</b>
<b>Time for action – testing the Registration Enrollment plugin Allowed Enrollments setting</b>	<b>272</b>
Testing the Registration Enrollment Plugin—a review	274
A note on Moodle customization	275
<b>Summary</b>	<b>276</b>

# Preface

Moodle is the most widely used Learning Management System in the world. Moodle is primarily used as an online learning course platform and few people know how to use it in any other way. However, Moodle can also be used as a management system. By adapting Moodle to become a curriculum and information management system, you can keep your administrative tasks in the same place as your lesson plans by managing student attendance records, recording grades, sharing reports between departments, and much more.

*Moodle as a Curriculum and Information Management System* will show you how you can use Moodle to set up an environment that enables you to disseminate information about your educational program, provide a forum for communication among all those involved in your institution, and even to control your course registration and enrollment.

This book will show you how to create courses and organize them into categories. You will learn to assign teachers to each course, which will greatly help you to manage timetables and student enrollment, which can otherwise be a very frustrating and time consuming task. You will learn how to display the different aspects of your Curriculum and Information Management System to make it easily accessible and navigable for staff and students alike, ensuring that everyone knows what they are doing and where they are meant to be.

This book is a practical step-by-step guide to expand the functionality of your Moodle Learning Management System.

## **What this book covers**

*Chapter 1, Welcome to Moodle as a Curriculum and Information Management System (CIMS)!*, explains how to expand the use of the Moodle system to function as a portal for information exchange, professional collaboration, and curriculum management.

*Chapter 2, Building the Foundation—Creating Categories and Courses*, explains and demonstrates how to create and organize the courses offered in your curriculum, within Moodle.

*Chapter 3, Student Account Creation and Enrollment*, explains how to create student accounts in bulk and experiment with different ways of enrolling those students in courses on the Moodle site.

*Chapter 4, Incorporating Educational Standards*, introduces and explains some tasks that will enable you to incorporate educational standards in your Moodle CIMS site.

*Chapter 5, Enabling your Moodle Site to Function as an Information Portal*, explores some of the possibilities such as modifying display settings, removing course lists from the category page, increasing the detailed summary settings, and others, through discussion and experimentation.

*Chapter 6, Customized Roles*, explores various methods for monitoring and reporting on student access and performance in the Moodle site.

*Chapter 7, Advanced Data Access and Display*, explores the installation and use of several tools that allow for more advanced methods of accessing data generated and used by your Moodle site.

*Chapter 8, Setting Up a Mini SIS*, explores two different methods of setting up Moodle to function as an SIS.

*Chapter 9, Promoting Efficient Communication*, introduces and explains the strategies for establishing an efficient communication portal through your Moodle CIMS.

*Chapter 10, Advanced Enrollment Plugin*, covers how to enable your site to function as a registration and enrollment system that will allow you to regulate how students matriculate through the set of courses that make up your curriculum.

## **What you need for this book**

- ◆ A web browser (Firefox preferred)
- ◆ A text editor

## **Who this book is for**

If you are a teacher or head of a department in an institution and are interested in how Moodle can be used to streamline curriculum delivery and information flow in your institution, this book is for you. This book is also useful for Moodle administrators.

## Conventions

In this book, you will find a number of styles of text that distinguish between different kinds of information. Here are some examples of these styles, and an explanation of their meaning.

Code words in text are shown as follows: "This will download a compressed package containing all of the files for the block called `myCourses.zip`."

A block of code is set as follows:

```
if (!defined('FRONTPAGECOURSELIMIT')) {  
    define('FRONTPAGECOURSELIMIT', 200);  
}
```

**New terms** and **important words** are shown in bold. Words that you see on the screen, in menus or dialog boxes for example, appear in the text like this: "Select your language and click on the **Next** button found at the bottom of the screen."

## Reader feedback

Feedback from our readers is always welcome. Let us know what you think about this book—what you liked or may have disliked. Reader feedback is important for us to develop titles that you really get the most out of.

To send us general feedback, simply send an e-mail to [feedback@packtpub.com](mailto:feedback@packtpub.com), and mention the book title via the subject of your message.

If there is a book that you need and would like to see us publish, please send us a note in the **SUGGEST A TITLE** form on <http://www.packtpub.com> or e-mail [suggest@packtpub.com](mailto:suggest@packtpub.com).

If there is a topic that you have expertise in and you are interested in either writing or contributing to a book, see our author guide on [www.packtpub.com/authors](http://www.packtpub.com/authors).

## Customer support

Now that you are the proud owner of a Packt book, we have a number of things to help you to get the most from your purchase.

### Downloading the example code for this book

You can download the example code files for all Packt books you have purchased from your account at <http://www.PacktPub.com>. If you purchased this book elsewhere, you can visit <http://www.PacktPub.com/support> and register to have the files e-mailed directly to you.

## Errata

Although we have taken every care to ensure the accuracy of our content, mistakes do happen. If you find a mistake in one of our books—maybe a mistake in the text or the code—we would be grateful if you would report this to us. By doing so, you can save other readers from frustration and help us improve subsequent versions of this book. If you find any errata, please report them by visiting <http://www.packtpub.com/support>, selecting your book, clicking on the **errata submission form** link, and entering the details of your errata. Once your errata are verified, your submission will be accepted and the errata will be uploaded on our website, or added to any list of existing errata, under the Errata section of that title. Any existing errata can be viewed by selecting your title from <http://www.packtpub.com/support>.

## Piracy

Piracy of copyright material on the Internet is an ongoing problem across all media. At Packt, we take the protection of our copyright and licenses very seriously. If you come across any illegal copies of our works, in any form, on the Internet, please provide us with the location address or website name immediately so that we can pursue a remedy.

Please contact us at [copyright@packtpub.com](mailto:copyright@packtpub.com) with a link to the suspected pirated material.

We appreciate your help in protecting our authors, and our ability to bring you valuable content.

## Questions

You can contact us at [questions@packtpub.com](mailto:questions@packtpub.com) if you are having a problem with any aspect of the book, and we will do our best to address it.

# 1

## **Welcome to Moodle as a Curriculum and Information Management System (CIMS)!**

*You are on your way to learn how to expand the use of the Moodle system to function as a portal for information exchange, professional collaboration, and curriculum management.*

This chapter will start with the basics by introducing the concepts and helping you to get your site installed and configured. The following topics will be addressed in this chapter:

- ◆ A brief explanation of Moodle, its underlying philosophy, and design
- ◆ Introduction of the CIMS idea
- ◆ Moodle installation
- ◆ Basic setup, configuration, and customization of your Moodle site

### **What is Moodle?**

Moodle is a web-based software package that allows you to create an environment in which an educational program can be delivered. What does that mean? Moodle allows you to create course environments where all sorts of education can take place. Moodle is now the most widely used online learning software package with over 49,000 registered Moodle sites as of the first quarter of 2010. It is used by private and public educational institutions ranging from kindergartens to universities as well as by a wide range of businesses, non-profit organizations, governmental bodies, and healthcare facilities for virtually every training and educational program imaginable.

## **A VLE, LMS, and CMS**

There are a multitude of acronyms out there today that claim Moodle as a member of their 'group'. Moodle is categorized as a **VLE (Virtual Learning Environment)** or **LMS (Learning Management System)** due to its focus on learning and education. Additionally, Moodle is described to be a **CMS (Course Management System)**, an **LCMS (Learning Content Management System)**, and sometimes even a **CMS (Content Management System)**.

Each of these categories of systems has its own unique and defining characteristics but for most of them, there are arguably more similarities than differences. Each is a software package that is installed on a server and set up to be accessed via the Internet or, in some business settings, through an intranet (an in-house network). The majority of them are designed to allow for the creation and maintenance of online learning environments. Two of the most widely used categories of systems that are used to describe Moodle, LMSs, and VLEs, are often used interchangeably, although the term LMS is generally used to describe a system of wider scope that includes the ability to perform administrative tasks involved in education such as reporting, documenting, and analyzing. Moodle's flexibility, in terms of how it can be set up and maintained, is one of the main reasons for its inclusion in virtually every category of online learning software package. In this sense, Moodle is similar to a chameleon that is capable of 'changing its color', or shifting its focus, in order to meet the needs of each institution and user.

## **Using Moodle as a CIMS**

In most institutions, there is a need to maintain data and information related to the education taking place as well as to perform various peripheral tasks that are not directly related to, or are at a macro level to the education itself.

Some examples of this type of peripheral work are:

- ◆ Monitoring of student attendance records
- ◆ Presenting information of course offerings to students in order that they may make decisions about what courses to take
- ◆ Assigning courses to students in programs where students are not allowed to select their own courses
- ◆ Controlling which courses, and how many courses, students can register for or enroll in
- ◆ Establishing limits on how many students can enroll in a single course
- ◆ Delivering and analyzing standardized tests to students within a school or other type of educational or training program and various other educational, administrative, and collaboration-type tasks and activities

As Moodle is designed to be extremely flexible and is provided as an open source package, it is fairly easy to extend, and even stretch Moodle through imaginative uses, installation of third-party contributed plugins, and minor code manipulations to enable it to function as a system that helps to manage an educational curriculum and to support the flow and use of information that is accumulated and digested in such educational settings. As such, Moodle will function as what I call a **Curriculum and Information Management System (CIMS)**, while simultaneously functioning as an LMS. The CIMS idea encapsulates the various tasks that surround an educational institution and includes functions that are often performed by Portals, **Student Information Systems (SIS)**, and Content Management Systems (CMS). As a CIMS, Moodle can perform all of the tasks listed in the previous paragraph as well as a host of others that will be introduced in subsequent chapters. Get ready for an exciting adventure in setting up Moodle as your core CIMS and LMS!

## Installing Moodle

Moodle installations can be roughly categorized into the following three categories:

- ◆ Installation of the XAMPP or MAMP packages
- ◆ Simple installation on a hosted web server
- ◆ Installation of a LAMP package on an in-house server

For the purpose of demonstrating how Moodle can function as a CIMS, we will walk through the installation and use of Moodle in MAMP and XAMPP packages. It is strongly recommended that you do not use a MAMP or XAMPP Moodle site as a production site (a site that is publicly accessible via the Internet). The MAMP or XAMPP environment is the ideal solution however, for being able to quickly experiment with Moodle on your own computer. If you prefer to experiment on a hosted server or dedicated LAMP installation, please make sure that your site is not available to the public and is not being used by students to ensure that you do not accidentally corrupt data or render your site inaccessible. Once you are comfortable with the methods presented in this book, you can implement them on a live production site. Additionally, the following information is provided as introductory information about preparing an environment in which Moodle can be served. Please visit the documentation area on the Moodle website ([http://docs.moodle.org/en/Main\\_Page](http://docs.moodle.org/en/Main_Page)) for a wealth of information about getting a Moodle site up and running.

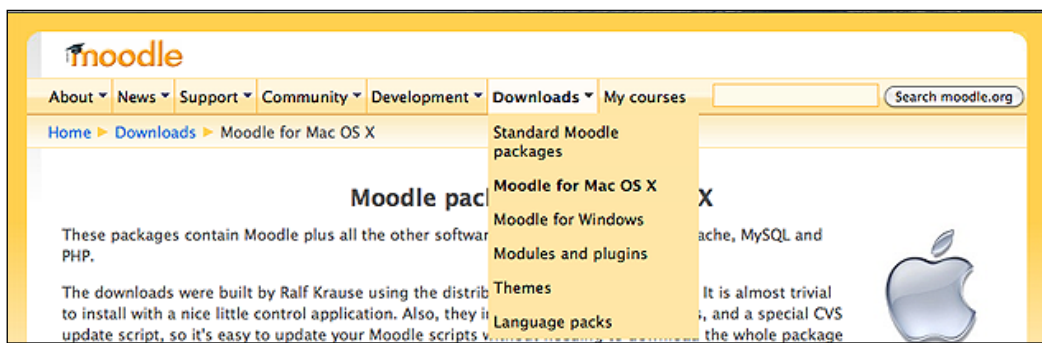

## Installing MAMP and XAMPP packages

One of the quickest and easiest ways to get a Moodle site up and running for experimental purposes is to install a MAMP or XAMPP package. These packages consist of web server software (Apache), database server software (MySQL), and PHP and Perl programming language 'interpreters', that all run on your personal computer. This will allow you to run Moodle locally on your own computer. The following instructions will help you get one of these prepackaged local servers running on your desktop or laptop computer.

### Time for action – installing the Mac OS X package

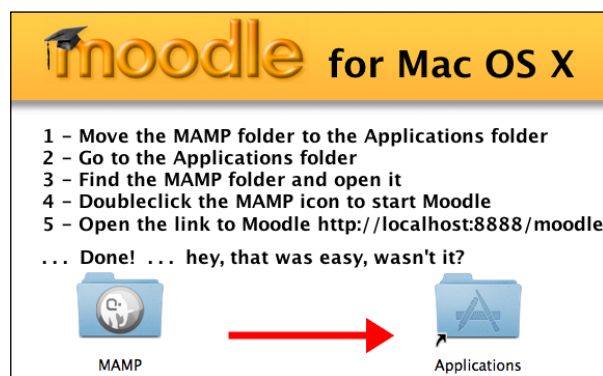

We will install the MAMP variety for Macintosh OS X because it is much more portable than the XAMPP variety. This means that once you have the MAMP folder in your **Applications** folder, all you need to do to use the MAMP package on a different computer is to copy the contents of the directory to the **Applications** folder of another machine running OS X. To install the Mac OS MAMP package, follow these steps:

1. First, go to [www.moodle.org](http://www.moodle.org) and move your mouse over the **Downloads** menu item.
2. Mouse over and click on the **Moodle for Mac OS X** link.
3. Then click on the **MAMP package** to start the download as shown in the following screenshot:

4. Once the download has completed, you will have a `Moodle4Mac-MAMP-19.dmg` file to work with. Double-click the file to decompress it. The following screenshot is of the window that will open when the dmg file has been mounted as a folder on your desktop.

5. Copy the contents of the MAMP package to your **Applications** folder, as instructed in the window.

6. Once all of the contents of the MAMP folder have been copied to your **Applications** folder, double-click on the **MAMP** application, shown in the following screenshot to launch the server control tool:

7. Click the **Start Servers** button to start the servers on your local computer. The Moodle instance contained in the MAMP package is preconfigured to use these servers.

8. The red light, to the left of the server name, will turn green signifying that it is running. The MAMP control tool will automatically open the MAMP startup page in your browser. Click on the **Moodle** tab, shown in the following screenshot, to open your Moodle site in a new page:

### ***What just happened?***

You have now installed all of the components necessary to turn your computer into an experimental server for your Moodle site. You also have a prepackaged instance of Moodle that is ready to use the servers you have installed and turned on. You can now jump forward to the *Basic setup and customization of your Moodle site* section in this chapter.

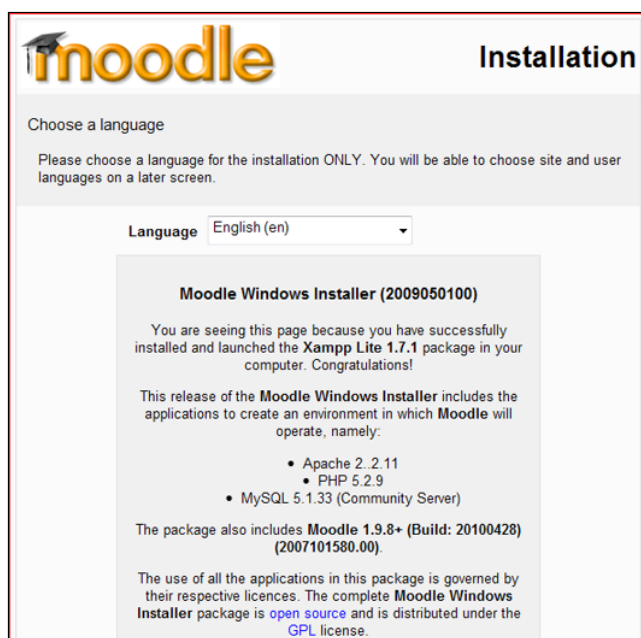

## **Time for action – installing the Windows package**

If you want to install a local instance of Moodle and the required server on a Windows machine, the XAMPP package is the only prepackaged variety available. The installation involves a few more steps than the Mac version but it is a straightforward process. To download and install the Windows version, follow these steps:

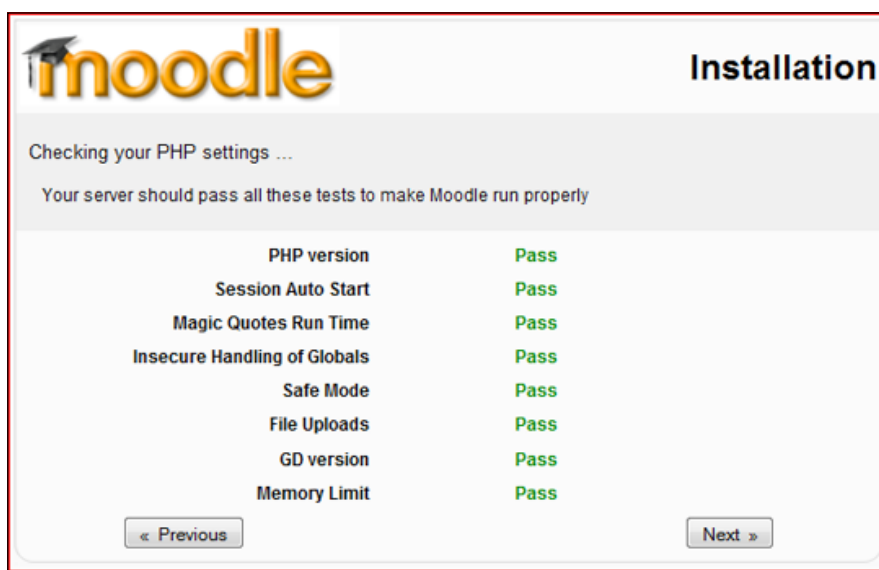

1. Click on **Moodle for Windows** from the **Downloads** drop-down menu from Moodle.org, and download the latest version.
2. Expand the contents of the package that is downloaded, to the location where you want your Moodle package. You will see a total of four items from the expanded package, as shown in the following screenshot. There will be a **Stop Moodle** icon, a **Start Moodle** icon, a **README** file, and a **server** folder. Detailed instructions can be found in the **README** file.

3. Double-click on the **Start Moodle** icon to start the Apache and database servers. A command prompt window with the message "Starting XAMPP" will appear and then after a few seconds the window will disappear. This means the servers are now running. Then proceed to the next step.
4. Navigate to your Moodle site by entering `http://localhost/` into your browser address window.
5. After having started the servers by clicking on **Start Moodle** and typing the local host address into your browser address window, you may get a warning from Windows depending on the browser you are using and how the operating system is configured, about firewall protection. Go ahead and allow the content and bypass any warnings in order to access the site. You have installed the site and are the only one accessing it, so there is no need to worry about it containing possibly malicious content.
6. You will now be taken to the Moodle installer script. This installation process is the biggest difference between the Mac OS and Windows XAMPP package installations for Moodle. In Windows, you will go through the exact same installation process that you would go through if you were setting up a Moodle site on a hosted or dedicated server. The first screen will prompt you to select a language and provide information about the XAMPP package being used.
7. Select your language and click on the **Next** button found at the bottom of the screen.

8. The next screen, shown in the following screenshot, will display the results of a PHP settings check. Everything should be OK as evidenced by the **Pass** message in green text to the right of each check item. If you get a **Fail** message in red text, you will need to determine the cause of the problem and fix it before you may proceed.
9. Click on the **Next** button to proceed with the installation.

10. The next screen, shown in the following screenshot, will ask you to confirm the locations of the Moodle installation. These will include:
  - ❑ The web address
  - ❑ The Moodle directory (where Moodle files are contained)
  - ❑ The data directory (where Moodle will store data files)

These should be automatically filled in and it is not recommended to change the locations of the two directories unless you know what you are doing

11. If you are using Windows Vista, change the web address setting however, to `http://127.0.0.1`. While localhost and 127.0.0.1 are the same, there is an issue in Windows Vista that sometimes prevents localhost from working properly. As an additional note, once you have these locations set you should not move the Moodle directory or data directory. Doing so will make your site inaccessible until you move the directories back or change the paths in the `config.php` file, which contains directory paths and other fundamental settings for Moodle and is found in the Moodle directory.
