About the Authors

Gill Cleeren is Microsoft's Regional Director, Silverlight MVP, INETA speaker bureau member and Silverlight Insider. He lives in Belgium, where he works as a .NET architect at Ordina. Since its introduction, Gill has been a .NET enthusiast. For the first few years of his career, he developed ASP.NET applications. The very day that Silverlight was introduced to the world, back in 2007, he started working with the technology. Since then, he has given many training sessions, written numerous articles and developed several applications, both with Silverlight and WPF.

As MVP and Regional Director, Gill is also very active in the Belgian and international community as a speaker and user group leader for Visug, the Belgian .NET user group. His blog on .NET, ASP.NET, and Silverlight can be found at <http://www.snowball.be>.

Writing has become a new passion of mine. Over a year ago, Kevin and I published our very first book, the full edition of the lite edition you're holding now. Writing a book is a lot of work but seeing the result of my hard work on a shelf in a bookstore is worth it. I hope this lite edition can introduce you to building small business applications with Silverlight!

Of course, writing a book is not the work of a single person! During the writing period, the people of Packt have been most helpful in every way. I really want to thank Kerry George for replying to the countless mails we have exchanged! Of course, a very big thank you to both my mother and my lovely girlfriend Lindsey, for the patience during the days I spent more time writing than being with you.

Kevin Dockx lives in Belgium and works at RealDolmen, one of Belgium's biggest ICT companies, where he is a technical specialist/project leader on .NET web applications, mainly Silverlight, and a solution manager for Rich Applications (Silverlight, WPF, Surface, WP7). His main focus lies on all things Silverlight, but he still keeps an eye on the new developments concerning other products from the Microsoft .NET (Web) Stack. As a Silverlight enthusiast, he's a regular speaker on various national and international events, like Microsoft TechDays Belgium & Portugal, Microsoft DevDays in The Netherlands or on BESUG events (the Belgian Silverlight User Group). His blog, which contains various tidbits on Silverlight, .NET, and the occasional rambling, can be found at <http://blog.kevindockx.com>.

After our previous book, Packt Publishing asked us if we'd like to take part in their "Lite" book program: short, to the point books that provide part of the full books' content, a useful introduction to what the full book offers, and a great starting point for developers. Sounded like a great idea to us, but let me tell you: It's not easy at all to select the correct chapters/recipes for a Lite edition. However, I'm confident this book offers a good taste of the full one: a good introduction to Silverlight, Data & Services - I hope you'll enjoy reading it!

I'd like to thank anyone who helped me out with this book. Besides that, I'd also like to thank my friends for sticking around while I was busy spending my time writing this book instead of socializing ;-)

About the reviewers

Kevin DeRudder is a .NET trainer and consultant at U2U, mainly focusing on the WEB. In the recent years, Kevin was involved in lots of Silverlight and ASP.NET projects for a variety of clients and projects.

Mike Hanley is the VP of Engineering at Vertigo Software, Inc. (<http://www.vertigo.com>). He has worked as a Software Engineer, specializing on the Microsoft Platform for over ten years. Recently, Mike has spent a great deal of time working on Silverlight applications for clients ranging from Hard Rock International to the Democratic National Committee. Most recently, Mike has worked on several live video events using IIS Smooth Streaming. Mike is a Certified Scrum Master and graduated from Harvey Mudd College with a B.S. in Computer Science. You can learn more about Mike on his blog: <http://www.michaelhanley.org>. During his spare time, Mike enjoys spending time with his wife Tylar and his first son Max. Mike also has an identical twin brother Kevin.

Tarkan Karadayi has been writing code since the age of 14. He has a Masters in Computer Science and is currently working as a Lead Developer.

Kris van der Mast, an active and dedicated moderator at the official Microsoft ASP.NET forums, has reserved himself a place among the Most Valuable Professionals since 2007 and in 2009 earned the ASP Insider title. He's also a known member of several of the Belgian user groups.

Kris works for Ordina Belgium, a consultancy company working for large corporates in Belgium and abroad, as a senior .NET developer and architect. He also provides courses to clients in his specialization and technical interests, that is, web technologies.

I would like to thank my wife Anna, my parents, and my three sons Taran, Kyle, and Ryan for their love and support.

Table of Contents

Preface	1
Chapter 1: An Introduction to Data Binding	5
Introduction	5
Displaying data in Silverlight applications	8
Creating dynamic bindings	19
Binding data to another UI element	22
Binding collections to UI elements	26
Enabling a Silverlight application to automatically update its UI	30
Obtaining data from any UI element it is bound to	38
Using the different modes of data binding to allow persisting data	43
Data binding from Expression Blend 4	48
Using Expression Blend 4 for sample data generation	51
Chapter 2: Talking to Services	55
Introduction	55
Connecting and reading from a standardized service	56
Persisting data using a standardized service	62
Configuring cross-domain calls	66
Working cross-domain from a trusted Silverlight application	73
Reading XML using HttpWebRequest	76
Reading out an RSS feed	82
Aggregating RSS feeds	85
Using socket communication in Silverlight	88
Index	101

Preface

This short, fast-paced cookbook teaches you how to build data-rich business applications with Silverlight that draw on multiple sources of data. Most of the features covered work both in Silverlight 3 and 4. However, we cover some that are specific to Silverlight 4, which will therefore not work with Silverlight 3. Where this is the case, it will be clearly indicated.

Packed with reusable, real-world recipes, this short book is designed to provide immediately useable recipes for building data-driven applications designed to show you how to interact with and handle multiple sources of data, how to solve particular data problems, and how to interact with services. The book specifically focuses on an introduction to Data Binding, and talking to Services.

This book is the LITE edition of a longer book, Microsoft Silverlight 4 Data and Services. With the full edition you will create rich, data-driven business applications in Silverlight with over 85 practical recipes.

To find out more about upgrading to the full edition, visit www.packtpub.com/liteupgrade and log into your account for offers and help. If you don't have an account on PacktPub.com, visit today and set one up!

What this book covers

Chapter 1, An Introduction to Data Binding will explore how data binding works. We'll start by building a small data-driven application that contains the most important data binding features, to get a grasp of the general concepts. We'll also see that data binding isn't tied to just binding single objects to an interface; binding an entire collection of objects is supported as well. We'll also be looking at the binding modes. They allow us to specify how the data will flow (from source to target, target to source, or both). We'll finish this chapter by looking at the support that Blend 4 provides to build applications that use data binding features. In the next chapter, we'll be looking at the more advanced concepts of data binding.

Chapter 2, *Talking to Services* talks about the rich set of options that Silverlight provides to communicate with services.

What you need for this book

To work with the recipes in this short book, it's required that you have Visual Studio installed. This book targets Silverlight 4, which works only with Visual Studio 2010. Many of the recipes in the book will also work in Silverlight 3, so for these recipes, you have the choice of Visual Studio 2008 or 2010. We do recommend using Visual Studio 2010, as it features a lot of enhancements for developing with Silverlight. In both cases, you'll of course need to install the Silverlight Tools, which will update your Visual Studio instance to work with Silverlight. Some recipes also require Blend 4 to be installed on your machine (again, if working with Silverlight 3, Blend 3 will suffice here as well).

Who this book is for

If you are a .NET developer who wants to build professional data-driven applications with Silverlight, then this book is for you. Basic Silverlight experience and familiarity with accessing data using ADO.NET in regular .NET applications is required.

Conventions

In this book, you will find a number of styles of text that distinguish between different kinds of information. Here are some examples of these styles, and an explanation of their meaning.

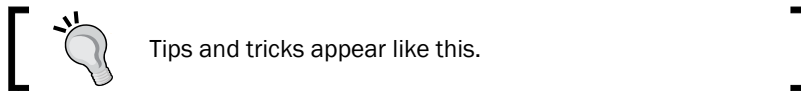

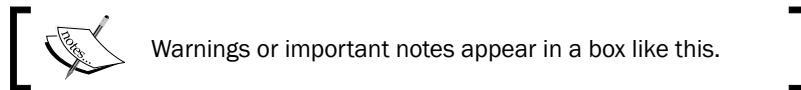

Code words in text are shown as follows: “Finally, the `DataReader` and connection are closed and the `StoreDTO` object is returned.”

A block of code will be set as follows:

```
public MainPage()
{
    InitializeComponent();
    //initialize owner data
    InitializeOwner();
    SetOwnerValues();
}
private void SetOwnerValues()
{
    OwnerIdValueTextBlock.Text = owner.OwnerId.ToString();
    FirstNameValueTextBlock.Text = owner.FirstName;
```

```
LastNameValueTextBlock.Text = owner.LastName;
AddressValueTextBlock.Text = owner.Address;
//other values go here
}
```

New terms and **important words** are shown in bold. Words that you see on the screen, in menus or dialog boxes for example, appear in our text like this: “Do this by right-clicking, selecting **Add New Item**, and then selecting **LINQ TO SQL Classes**.”.

Reader feedback

Feedback from our readers is always welcome. Let us know what you think about this book—what you liked or may have disliked. Reader feedback is important for us to develop titles that you really get the most out of.

To send us general feedback, simply drop an email to feedback@packtpub.com, and mention the book title in the subject of your message.

If there is a book that you need and would like to see us publish, please send us a note in the **SUGGEST A TITLE** form on www.packtpub.com or email to suggest@packtpub.com.

If there is a topic that you have expertise in and you are interested in either writing or contributing to a book, see our author guide on www.packtpub.com/authors.

Customer support

Now that you are the proud owner of a Packt book, we have a number of things to help you to get the most from your purchase.
